THE SOCIAL ECONOMY IN THE EUROPEAN UNION

SHORT TABLE OF CONTENTS

Preface

1. Introduction and objectives

2. Historical evolution of the Social Economy concept

3. Identification of the actors or groups included in the Social Economy concept

4. The main theoretical approaches related to the Social Economy concept

5. Comparative analysis of the prevailing definitions relating to the concept of the Social Economy in each European Union member state and candidate countries

6. The Social Economy in the European Union and in the candidate countries in figures

7. The legal framework of the Social Economy actors in the European Union countries and candidate countries and the public policies in place, with special attention to recent new national legislation on the social economy

8. The Social Economy in a Europe facing a global crisis

9. European Union Policies and the Social Economy, with special attention to the Europe 2020 strategy: facts and impacts

10. Challenges and Conclusions

BIBLIOGRAPHY

APPENDIX

THE SOCIAL ECONOMY IN THE EUROPEAN UNION

TABLE OF CONTENTS

Preface

Chapter 1. INTRODUCTION AND OBJECTIVES

- 1.1. Introduction and Objectives
- 1.2. Methods
- 1.3. Structure and summary of the Report

Chapter 2. HISTORICAL EVOLUTION OF THE SOCIAL ECONOMY CONCEPT

- 2.1. Popular associations and cooperatives at the historical origin of the Social Economy
- 2.2. Scope and field of activity of the Social Economy
- 2.3. Present-day identification and institutional recognition of the Social Economy

Chapter 3. IDENTIFICATION OF THE ACTORS OR GROUPS INCLUDED IN THE SOCIAL ECONOMY CONCEPT

- 3.1. The Social Economy in the National Accounts Systems
- 3.2. A definition of the Social Economy that fits in with the national accounts systems
- 3.3. The market or business sub-sector of the Social Economy
- 3.4. The non-market sub-sector of the Social Economy
- 3.5. The Social Economy: pluralism and shared core identity

Chapter 4. THE MAIN THEORETICAL APPROACHES RELATED TO THE SOCIAL ECONOMY CONCEPT

- 4.1. The Third Sector as a meeting point
- 4.2. The Non-Profit Organisation approach
- 4.3. The Solidary Economy approach
- 4.4. The Social Enterprises approach
- 4.5. Other approaches
- 4.6. Resemblances and differences between these approaches and the Social Economy concept

Chapter 5. COMPARATIVE ANALYSIS OF THE PREVAILING DEFINITIONS RELATING TO THE CONCEPT OF THE SOCIAL ECONOMY IN EACH EUROPEAN UNION MEMBER STATE AND CANDIDATE COUNTRIES

- 5.1. The prevailing concepts in each country
- 5.2. The Social Economy actors in the member states of the European Union

Chapter 6. THE SOCIAL ECONOMY IN THE EUROPEAN UNION AND IN THE CANDIDATE COUNTRIES IN FIGURES

Chapter 7. THE LEGAL FRAMEWORK OF THE SOCIAL ECONOMY ACTORS IN THE EUROPEAN UNION COUNTRIES AND CANDIDATE COUNTRIES AND THE PUBLIC POLICIES IN PLACE, WITH SPECIAL ATTENTION TO RECENT NEW NATIONAL LEGISLATION ON THE SOCIAL ECONOMY

- 7.1. Legislation governing the Social Economy actors in the European Union
- 7.2. Public policies towards the Social Economy in European Union countries
- 7.3. New national legislation on the Social Economy (Spain, Portugal, and social enterprises legislation)

Chapter 8. THE SOCIAL ECONOMY IN A EUROPE FACING A GLOBAL CRISIS

- 8.1. The Social Economy facing conjunctural and structural crisis
- 8.2. The Social Economy facing financial crisis
- 8.3. The Social Economy facing the economic and employment crisis
- 8.4. The Social Economy facing the public sector and welfare state crisis

Chapter 9. EUROPEAN UNION POLICIES AND THE SOCIAL ECONOMY, WITH SPECIAL ATTENTION TO THE EUROPE 2020 STRATEGY: FACTS AND IMPACTS.

- 9.1. The Social Economy in the European Union Policies: facts and perception
- 9.2. The Social Economy in the Europe 2020 Strategy
- 9.3. Recent European Union initiatives towards Social Economy

Chapter 10. CHALLENGES AND CONCLUSIONS

- Correspondents
- Glossary

PREFACE

In 2006, the European Economic and Social Committee (EESC) commissioned a Report from the International Centre of Research and Information on the Public, Social and Cooperative Economy (CIRIEC) in order to take stock of the Social Economy in the 25 member states of the European Union. A precondition for this stocktaking was to identify a core identity that is shared by all the companies and organisations in this sphere. Its purpose was highly practical: so that the Social Economy (SE) can be visualised and recognised. Which, how many, where, how they have developed, how large or important they were, how the public and governments saw them, what problems they solved and how they contributed to the creation and equitable distribution of wealth and to social cohesion and welfare: these are the questions that the Report addressed.

In 2011 the EESC decided to bring the Report up to date in order to include the new member countries, Bulgaria and Romania, and two candidate countries, Croatia and Iceland, as well as the earlier members. Once more, it commissioned CIRIEC to carry out the work, the results of which are presented in this Report.

The Report has been written by two experts from CIRIEC. The directors and writers, José Luis Monzón and Rafael Chaves, are both members of the Institute of the Social and Cooperative Economy of the University of Valencia (IUDESCOOP-UV) and of the CIRIEC International Scientific Committee for the Social Economy.

As the writers of the report, we have had the permanent support and advice of a Committee of Experts composed of Danièle Demoustier (Institut d'Études Politiques de Grenoble, France), Roger Spear (Open University, Milton Keynes, United Kingdom), Alberto Zevi (Italy), Chiara Carini (Euricse, Italy) and Magdalena Huncova (Czech Republic). The advice of every one of them has been very valuable at every stage: designing the work schedule, deciding on the methodology, drawing up questionnaires and supervising the final Report.

We would like to express our gratitude to the members of the Social Economy Category of the European Economic and Social Committee, who very kindly discussed an Intermediate Report during their meeting of 16 March 2012 in Brussels. Their information, observations and advice have been most useful in carrying out and concluding the work.

This Report would not have been possible without the support and involvement of the European network of national sections of CIRIEC and CIRIEC's Scientific Committee for the SE. Thanks to them we were able to set up a very large network of correspondents and co-workers in all the countries of the European Union and to benefit from CIRIEC's long record of research in decisive theoretical aspects. We are indebted to all their relevant works.

One of the central objectives of the Report, the comparative analysis of the current situation of the SE by countries, could not have been achieved without the decisive help of correspondents – academics, sector experts and highly-placed civil servants in the 27 member countries and 2 candidates for EU membership (Croatia and Iceland) – listed at the end of this Report. All of them answered a comprehensive questionnaire on the SE in their respective countries, carrying out this work with great professionalism and generosity. Ben Telfer (ICMIF), Fabienne Fecher (Belgium), Luca Jahier (Italy), Joao Leite (Portugal), Gurli Jakobsen (Denmark), Edith Archambault (France), Carmen Comos (Spain), Günther Lorentz (Germany), Paul A. Jones (United Kingdom) and Peter Herrmann (Ireland) all became actively involved in

the survey process, offering us extremely useful information and advice. And finally B. Gonda, G. Szocialis, K. Joo and T. Ibolya all from Hungary and Ancuta Vamesu from the Institute for Social Economy of Rumania provided useful information about the Social Economy in the new European Union Countries.

Pepe Monzón of CIRIEC-España played a decisive role in setting up and coordinating the network of correspondents. We are very pleased to acknowledge the excellent work he has done.

Ana Ramón of CIRIEC-España's administrative services and Christine Dussart at the Liège office took good care of the administrative and secretarial work involved in preparing the Report, which was written in Spanish and translated into English by Gina Hardinge and the company B.I.Europa. Bernard Thiry, the Director of CIRIEC, placed the entire network of the organisation at our disposal and involved himself personally in finding useful information and improving the content of the Report.

We feel privileged to have been given the opportunity to direct the preparation of this Report which, we hope, will serve to boost awareness of the SE as one of the pillars of the construction of Europe. The SE centres on people, on human beings, who are its reason for being and the goal of its activities. The SE is the economy of citizens who take charge of and are responsible for their own destinies. In the SE, men and women take the decisions equally. After all is said and done, it is they who make history.

José Luis Monzón and Rafael Chaves

CHAPTER 1

INTRODUCTION AND OBJECTIVES

1.1 Introduction and objectives

1.2 Methods

1.3 Structure and summary of the Report

1.1 Introduction and objectives

The general objective of the Report is to update the study entitled “The Social Economy in the European Union”, published in 2008 by the European Economic and Social Committee, to include all 27 European Union Member States and the two candidate countries (Croatia and Iceland). It examines the definitions, state and contribution of the Social Economy (SE), legal instruments and public policies towards it, and also the impact of the economic crisis.

To attain this final objective, the Report employs three intermediate objectives or tools that have been insufficiently defined until now. The first consists in establishing a clear, rigorous conceptual delimitation of the SE and of the different classes of company and organisation that form part of it.

The second intermediate objective aims to identify the different agents which, irrespective of their legal form, form part of the SE in each of the member states of the EU on the basis of the definition established in this Report and to compare the different national definitions that are related to the SE concept.

The third intermediate objective is to provide macro-economic data on the SE in the 27 Member States and the two candidate countries. Additionally, it now also includes an examination of recent national legislation on the SE, a comparative analysis at the national level of current concepts and perceptions of the SE in each country and, finally, an analysis of how the social economy can and will contribute to implementing the “Europe 2020 Strategy”.

1.2 Methods

The Report has been directed and written by Rafael Chaves and José Luis Monzón of CIRIEC, advised by a Committee of Experts composed of D. Demoustier (France), R. Spear (United Kingdom), Alberto Zevi (Italy), Chiara Carini (Italy) and Magdalena Huncova (Czech Republic), who have discussed the entire work schedule, methodology and proposed final Report with the directors.

As an updated Report, most parts of the document have benefited from the previous Report, published in 2008, entitled “The Social Economy in the European Union”. With regard to the methods themselves, the first part of the Report takes the definition of the business or market sector of the SE given in the European Commission Manual for drawing up the satellite accounts of cooperatives and mutual societies as the basis for establishing a definition of the SE as a whole that is intended to achieve wide political and scientific consensus.

Concerning the second of the Report's objectives, a major field study was conducted in February, March and April 2012 by sending out a questionnaire to the 27 member states of the EU and the two candidate countries. It was sent to privileged witnesses with an expert knowledge of the SE concept and related areas and of the reality of the sector in their respective

countries. These experts are university researchers, professionals working in the federations and structures that represent the SE and highly-placed national government civil servants with responsibilities in relation to the SE. The results have been highly satisfactory, as 52 completed questionnaires have been collected from 26 countries. Data from European organizations such as Cooperatives Europe, COGECA or ICMIF have helped to fill in the gaps.

Table 1.1. Questionnaires received

	Questionnaires

Iceland	1

As regards the third intermediate objective of the Report, identifying public policies, examining recent national legislation on the social economy and analysing the impact of the economic crisis on the social economy and how the social economy can and will contribute to implementing the “Europe 2020 Strategy”, this was done through consulting the Committee of Experts and sector experts, through information supplied in the questionnaires and through discussions with the Committee of Experts and within the CIRIEC Scientific Committee for the SE.

1.3 Structure and summary of the Report

The Report has been structured as follows:

After this first chapter introducing the Report and its objectives, Chapter 2 presents the historical evolution of the concept of the Social Economy, including the most recent information on its recognition in the national accounts systems.

Chapter 3 begins by formulating a definition of the SE that fits in with the national accounts systems, then identifies the major groups of agents in the SE on this basis.

Chapter 4 summarises the main theoretical approaches that are related to the SE concept, establishing the resemblances and differences between them.

Chapter 5 and 6 present an overview of the current situation of the SE in the EU, providing a comparative analysis of the perceptions of the Social Economy in each country and macro-economic data on the social economy in the 27 Member States and the two candidate countries.

Chapters 7, 8 and 9 present an overview of recent national legislation on the social economy and public policies that each country has developed in relation to the SE, followed by a review of the impact of the economic crisis and the contribution of the SE to implementing the “Europe 2020 Strategy”.

Lastly, Chapter 10 analyses the challenges and trends and presents the Report's conclusions. The bibliographical references and Appendices bring the Report to a close.

CHAPTER 2

HISTORICAL EVOLUTION OF THE SOCIAL ECONOMY CONCEPT

- 2.1. Popular associations and cooperatives at the historical origin of the Social Economy
 - 2.2. Present-day scope and field of activity of the Social Economy
 - 2.3. Present-day identification and institutional recognition of the Social Economy
-

2.1. Popular associations and cooperatives at the historical origin of the Social Economy

As an activity, the *Social Economy* (SE) is historically linked to popular associations and cooperatives, which make up its backbone. The system of values and the principles of conduct of the popular associations, synthesised by the historical cooperative movement, are those which have served to formulate the modern concept of the SE, which is structured around three large families of organisations: cooperatives, mutual societies and associations, with the recent addition of foundations. In reality, at their historical roots these great families were intertwined expressions of a single associative impulse: the response of the most vulnerable and defenceless social groups, *through self-help organisations*, to the new conditions of life¹ created by the development of industrial capitalism in the 18th and 19th centuries. Cooperatives, mutual assistance societies and resistance societies reflected the three directions that this associative impulse took (López Castellano, 2003).

Although charity (charity foundations, brotherhoods and hospitals) and mutual assistance organisations had seen considerable growth throughout the Middle Ages, it was at this time that popular associations, cooperatives and mutual societies acquired extraordinary impetus through initiatives launched by the working classes. In Britain, for instance, the number of *Friendly Societies* multiplied in the 1790s. Throughout Europe, numerous mutual provident societies and mutual assistance societies were set up (Gueslin, 1987). In Latin American countries such as Uruguay and Argentina also, the mutualist movement grew considerably during the second half of the 19th century (Solà i Gussinyer, 2003).

The first stirrings of cooperative experiments in Great Britain flowered in the late 18th and early 19th centuries as a spontaneous reaction by industrial workers to overcome the difficulties of their harsh living conditions. However, the socialist thinking developed by Robert Owen and Ricardian anti-capitalists such as William Thompson, George Mudie, William King, Thomas Hodgskin, John Gray and John Francis Bray was soon to exert considerable influence

¹ The Common Company of Ampelakia (Greece) is considered the first modern cooperative in the world. It was founded between 1750 and 1770 where the small cotton-growing and red yarn-producing fellowships (*syntrofies*) in 22 villages in the Tempi area united in 1772 to avoid unnecessary rivalry and competition. It became a major enterprise, with 6000 members, 24 factories and 17 branches throughout Europe, from St. Petersburg and London to Smyrna. Its members benefited from social insurance, health facilities, schools and libraries and the Free University of Ampelakia. It was dissolved in 1812 under the combined pressures of heavy taxes and economic and technical developments in the yarn industry (Kalitsounakis, 1929: 224-231, quoted in Nasioulas, 2010:64).

on the cooperative movement² and from 1824 to 1835 a close connection was established between this movement and trade union associationism, as both were expressions of a single workers' movement and had the same objective: the emancipation of the working classes. The eight *Co-operative Congresses* held in Britain between 1831 and 1835 coordinated both the cooperatives and the trade union movement. Indeed, the *Grand National Consolidated Trades Union* was formed at one of these congresses, uniting all the British trades unions (Monzón, 1989; Cole, 1945).

William King intervened directly and decisively in the development of the cooperative movement in Britain and influenced the well-known cooperative that was founded in Rochdale (England) in 1844 by 28 workers, 6 of whom were disciples of Owen (Monzón, 2003) The famous co-operative principles that governed the workings of the Rochdale Pioneers were adopted by all kinds of cooperatives, which created the International Co-operative Alliance (ICA) in 1895, in London, and have made a notable contribution to the development of the modern concept of the SE³.

Following the 1995 Congress of ICA, held in Manchester, these *Principles* identify cooperatives as democratic organisations in which the decisions are in the hands of a majority of *user members of the cooperativised activity*, so investor or capitalist members, if any, are not allowed to form a majority and surpluses are not allocated according to any criteria of proportionality to capital. Equal voting rights, limited compensation on the share capital obligatorily subscribed by the user members and the creation in many cases of indivisible reserves that cannot be distributed even if the organisation is dissolved are further aspects in which cooperatives differ from capitalist companies.

From Rochdale onwards, cooperatives have attracted the attention of different schools of thought. Indeed, crossing ideological boundaries and analytical pluralism are among the characteristics of the literature that has addressed this phenomenon. Utopian socialists, Ricardian socialists, social Christians (both Catholic and Protestant) and social liberals, as well as eminent classical, Marxist and neo-classical economists, have analysed this heterodox type of company profusely.

In the multi-faceted expression of popular associationism, Britain does not constitute an exception. In continental Europe, workers' associationism was manifest in the growth of mutualist and cooperative initiatives. In Germany, cooperativism boomed in rural and urban areas, together with mutual assistance societies. The ideas of the workers' industrial association movement were widely disseminated in Germany in the mid 19th century by Ludwig Gall, Friedrich Harkort and Stephan Born (Monzón, 1989; Bravo, 1976; Rubel, 1977)⁴. Although one of the first German cooperatives for which there are references was set up by a group of weavers and spinners⁵, cooperativism developed in urban areas through the work of Victor-Aimé Huber and Schulze-Delitzsch, and in rural areas, Friedrich Wilhelm Raiffeisen, who set up and spread the *Darlehenskassenvereine* credit unions. The first of these was founded in Anhausen and its spectacular growth culminated in 1877 with the founding of the German Federation of Rural Cooperatives of the Raiffeisen type (Monzón, 1989). At the same time, both

² In 1821 George Mudie published the first Owenian cooperativist newspaper, *The Economist*. From 1828 to 1830, in Brighton, William King published a monthly periodical, *The Co-operator*, which did much to spread cooperative ideas (Monzón, 1989).

³ A detailed analysis of the Rochdale experience and its operating principles may be found in Monzón (1989).

⁴ Bravo, G.M (1976): *Historia del socialismo, 1789-1848*, Ariel, Barcelona
Rubel, M (1977): "Allemagne et coopération", *Archives Internationales de Sociologie de la Coopération et du Développement*, N° 41-42.

⁵ This was the *Ermunterung* consumers' cooperative, founded in Chemnitz in 1845 (Hesselbach, W. (1978): *Las empresas de la economía de interés general*, Siglo XXI).

workers' mutual assistance societies and rural mutualism became established institutions in German society and were regulated by an imperial law of 1876 (Solà I Gussinyer, 2003).

In Spain, popular associationism, mutualism and cooperativism forged strong links as they expanded. They were often set up by the same groups, as is the case of the weavers of Barcelona. Their *Asociación de Tejedores* or Weavers' Association, the first trades union in Spain, was founded in 1840, at the same time as the *Asociación Mutua de Tejedores* mutual provident society, which in 1842 created the *Compañía Fabril de Tejedores*. This is considered the first production cooperative in Spain and was a mixture of "workers' production society and mutual assistance society" (Reventos, 1960).

In Italy, mutual assistance societies were very numerous in the middle third of the 19th century, preceding the first cooperatives. It was precisely a mutual assistance society, the *Società operaia di Torino*, that in 1853 set up the first consumers' cooperative in Italy, the *magazzino di previdenza di Torino*, to defend the purchasing power of its members' wages. Similar instances of friendly societies' creating consumers' cooperatives ensued in other Italian cities (De Jaco, 1979).

Nonetheless, of all the European countries, France is probably the one where the origins of the SE are most visibly a manifestation of popular associative movements and indissociable from these. Indeed, the emergence of cooperatives and mutual societies during the first half of the 19th century cannot be explained without considering the central role of popular associationism, which in its industrial associationism version found its driving force in Claude-Henri de Saint-Simon, an exponent of one of the French socialist currents.

Under the influence of the associationist ideas of Saint-Simon and his followers, numerous workers' associations were created in France from the 1830s onwards and although the term 'co-operation' was introduced into France in 1826⁶ by Joseph Rey, an Owenite, during most of the 19th century production cooperatives were known as 'workers' production associations'⁷. The first significant workers' cooperative in France, for instance, the *Association Chrétienne des Bijoutiers en Doré*, founded in Paris in 1834⁸, was started by Jean-Phillippe Buchez, a disciple of Saint-Simon. Its founding date and the name of its 'father' have the advantage of immediately locating the *workers' production cooperatives* in the environment in which they originated: the first half of the 19th century, in the melting-pot of social experiments and socialist associationist doctrines that marked the birth of the workers' movement (Vienney, 1966).

Associationism also played a fundamental part in other socialist currents, such as those influenced by Charles Fourier, who called for society to organise itself through associations, mutual societies and phalanxes, multi-purpose communities of workers with a comprehensive network of multiple solidarities (Desroche, 1991). Workers' production associations also occupied a decisive place in the thinking of Louis Blanc, who proposed that production should

⁶ Joseph Rey was the author of the "Lettres sur le système de la Coopération mutuelle et de la Communauté de tous les biens d'après le plan de M. Owen" The first of these letters was published in 1826 by the Saint-Simonian journal *Le Producteur* (Lion et Rocher, 1976).

⁷ Even in 1884, when the French workers' production cooperatives federated they did so under the name of *Chambre consultative des associations ouvrières de production*. This was the forerunner of today's *Confédération générale des sociétés coopératives (ouvrières) de production* - or General Confederation of (Workers') Production Cooperatives.

⁸ This was a significant cooperative, and not only because of its considerable expansion, opening as many as eight branches in Paris and operating for thirty-nine years, until 1873 (Monzón, 1989). It was significant above all because of its rules, as in many aspects Buchez was ahead of the Rochdale Pioneers in outlining the most important principles of the cooperative movement: a company based on people, not capital, democratic organisation (one person, one vote), distribution of surpluses in proportion to work, creation of an indivisible reserve, limits to the employment of salaried workers, etc. (Desroche, 1957).

be organised through the widespread establishment of state-supported, worker-controlled *social workshops* (Monzón, 1989).

Mutual assistance and mutual provident societies very quickly became widespread in 19th century France and although their origins and activities were highly diverse, workers' associationism was behind most of the 2500 mutual assistance societies, with 400,000 members and 1.6 million beneficiaries, that France numbered in 1847 (Gueslin, 1987).

The term *social economy* appeared in economics literature, probably for the first time, in 1830. In that year the French liberal economist Charles Dunoyer published a *Treatise on social economy* that advocated a moral approach to economics⁹. Over the 1820-1860 period, a heterogeneous current of thought which can collectively be termed the *social economists* developed in France. Most of them were influenced by the analyses of T.R. Malthus and S. de Sismondi, as regards both the existence of 'market failures' that can lead to imbalances and the delimitation of the true object of economics, which Sismondi considered to be *man* rather than *wealth*. However, most of the social economists must be placed within the sphere of liberal economic thinking and identified with *laissez-faire* principles and with the institutions, including capitalist companies and the markets, that the emerging capitalism was to consolidate.

As a result, the social economics of the period did not launch or promote any alternative or complementary initiative to capitalism. Rather, these economists developed a theoretical approach to society and what is social, pursuing the reconciliation of morality and economics through the moralisation of individual behaviour, as in the model of F. Le Play (Azam, 2003), for whom the goal that economists should strive for is not welfare or wealth but social peace (B. de Carbon, 1972).

Social economics underwent a profound reorientation during the second half of the 19th century, through the influence of two great economists, John Stuart Mill and Leon Walras.

J.S. Mill paid considerable attention to business associationism among workers, in both its cooperative and its mutualist aspect¹⁰. In his most influential work, *Principles of Political Economy*, he examined the advantages and drawbacks of workers' cooperatives in detail, calling for this type of company to be encouraged because of its economic and moral benefits¹¹.

Like J.S. Mill, Leon Walras considered that cooperatives can fulfil an important function in solving social conflicts by playing a great "economic role, not by doing away with capital but by making the world less capitalist, and a moral role, no less considerable, which consists in introducing democracy into the workings of the production process" (Monzón, 1989).

Walras' *Études d'Économie Sociale: théorie de la répartition de la richesse sociale* (Studies in Social Economy: theory of the distribution of social wealth), published in Lausanne in 1896¹², marks a major break from the original social economy approach identified with F. Le

⁹ In Spain, too, *Lecciones de economía social* by Ramón de la Sagra was published in 1840.

¹⁰ J.S. Mill made a decisive contribution to the passing of the Industrial and Provident Societies Act in Great Britain in 1852, the first law in the world to regulate the cooperative phenomenon.

¹¹ As well as their macroeconomic benefits, Mill sustained that workers' cooperatives would mean a "moral revolution" in society, as they would achieve "the healing of the standing feud between capital and labour, the transformation of human life, ... the elevation of the dignity of labour; a new sense of security and independence in the labouring class, and the conversion of each human being's daily occupation into a school of the social sympathies and the practical intelligence" (Mill, 1951:675; first published in 1848). A detailed analysis of Mills' ideas on cooperatives may be found in Monzón, 1989.

¹² A modern edition in French is *Études d'économie sociale: théorie de la répartition de la richesse sociale*, Leon Walras, Economica, Paris, 1990.

Play's model. With Walras, the social economy became both part of the science of Economics¹³ and a field of economic activities that is prolific in cooperatives, mutual societies and associations, as we know them today. It was at the end of the 19th century that the principal features of the modern concept of the Social Economy took shape, inspired by the values of democratic associationism, mutualism and cooperativism.

2.2. Present-day scope and field of activity of the Social Economy

Although the SE was relatively prominent in Europe during the first third of the 20th century¹⁴, the growth model in Western Europe during the 1945-1975 period mainly featured the traditional private capitalist sector and the public sector. This model was the basis of the Welfare State, which faced up to the known market failures and deployed a package of policies that proved highly effective for correcting them: income redistribution, resource allocation and anticyclical policies. All of these were based on the Keynesian model, in which the great social and economic actors are the employers' federations and trades unions, together with the public authorities.

In Central and Eastern European countries, linked to the Soviet system and with centrally-planned economies, the State was the only figure of economic activity, leaving no space for the SE agents to act. Cooperatives alone had a considerable presence in some Soviet bloc countries, although some of their traditional principles such as voluntary and open membership and democratic organisation were totally annihilated. In the last two centuries, Czech economists were coming up with social-economic approaches without always preferring only profitable market viewpoints. Large amount of non-profit organisations during the period of The First Czechoslovak Republic were following the tradition, which had been dating back to the 19th century¹⁵.

The consolidation of mixed economy systems did not prevent the development of a notable array of companies and organisations – cooperatives, mutual societies and associations – that helped to solve socially important and general interest issues concerning cyclical unemployment, imbalances between geographical areas and in the rural world and the skewing of power between retail distribution organisations and consumers, among others. However, during this period the SE practically disappeared as a significant force in the process of harmonising economic growth with social welfare, where the State occupied almost the entire stage. It was not until the crisis of the Welfare State and the mixed economy systems in the last quarter of the 20th century that some European countries saw a reawakening of interest in the typical organisations of the SE, whether business alternatives to the formats of the capitalist and public sectors, such as *cooperatives* and *mutual societies*, or non-market organisations, mostly *associations* and *foundations*¹⁶. This interest sprang from the difficulties that the market economies were encountering in finding satisfactory solutions to such major problems as massive long-term unemployment, social exclusion, welfare in the rural world and in run-down

¹³ "What I call social economy, as does J.S. Mill, is that part of the science of social wealth that addresses the distribution of this wealth between individuals and the State" (B. de Carbon, 1972).

¹⁴ The zenith of its institutional recognition may be considered the Paris Exhibition of 1900, which included a Social Economy pavilion. In 1903 Charles Gide wrote a report on this pavilion in which he underlined the institutional importance of the SE for social progress.

¹⁵ Information from Jiri Svoboda, Cooperative Association of Czech Republic (Czech Republic).

¹⁶ In the European System of National and Regional Accounts (the 1995 ESA), *non-market output* is goods and services that certain organisations supply to other units (e.g. households or families) without charge or at prices that are not economically significant. *Non-market producers* are those that supply *the majority of their output* free or at insignificant prices. Most private non-market producers are associations and foundations, although many of these organisations are also *market producers* and, moreover, of considerable economic importance.

urban areas, health, education, the quality of life of pensioners, sustainable growth and other issues. These are social needs that are not being sufficiently or adequately supplied either by private capitalist agents or by the public sector and for which no easy solution is to be found through market self-adjustment mechanisms or traditional macroeconomic policies.

Although a series of demutualisations of major cooperatives and mutual societies has taken place in some European countries, in recent decades, overall, the business sector of the SE (cooperatives and mutual societies) has seen considerable growth, as recognised by the European Commission's *Manual for drawing up the Satellite Accounts of Companies in the Social Economy* (Barea and Monzón, 2006).

Major studies have highlighted the considerable growth of the SE as a whole in Europe. One of the most significant of these, carried out by CIRIEC for the European Commission within the framework of the "Third System and Employment" Pilot Scheme (CIRIEC, 2000), highlights the increasing importance of cooperatives, mutual societies and associations for creating and maintaining employment and correcting serious economic and social imbalances.

After the soviet bloc crumbled, many cooperatives in Eastern and Central Europe collapsed. Furthermore, they were severely discredited in the eyes of the public. Lately, however, a revival of citizens' initiatives to develop SE projects has been taking place and is being reflected by proposals for legislation to boost the organisations in this sector.

Spectacular growth in the SE has taken place in the field of organisations engaged in producing what are known as *social or merit goods*, mainly work and social integration and providing social services and community care. In this field, associationism and cooperativism seem to have reencountered a common path of understanding and co-working in many of their projects and activities, as in the case of *social enterprises*, many of them cooperatives, which are already legally recognised in various European countries such as Italy, Portugal, France, Belgium, Spain, Poland, Finland and the United Kingdom (CECOP, 2006). Their characteristics are summarised in section 3.2.D of this Report.

In the EU-27, over 207,000 cooperatives were economically active in 2009. They are well-established in every area of economic activity and are particularly prominent in agriculture, financial intermediation, retailing and housing and as workers' cooperatives in the industrial, building and service sectors. These cooperatives provide direct employment to 4.7 million people and have 108 million members¹⁷.

Health and social welfare mutuals provide assistance and cover to over 120 million people. Insurance mutuals have a 24% market share¹⁸.

In the EU-27, associations employed 8.6 million people in 2010; they account for over 4% of GDP and their membership comprises 50% of the citizens of the European Union (CIRIEC; Jeantet, 2006).

In conclusion, over and beyond its quantitative importance, in recent decades the SE has not only asserted its ability to make an effective contribution to solving the new social problems, it has also strengthened its position as a necessary institution for stable and sustainable economic growth, fairer income and wealth distribution, matching services to needs, increasing the value of economic activities serving social needs, correcting labour market imbalances and, in short, deepening and strengthening economic democracy

2.3. Present-day identification and institutional recognition of the Social Economy

Identification of the SE as it is known today began in France, in the 1970s, when the organisations representing the cooperatives, mutual societies and associations created the *National Liaison Committee for Mutual, Cooperative and Associative Activities (CNLAMCA)*¹⁹. From the end of World War II to 1977, the term 'Social Economy' had fallen out of everyday use, even among the 'families' in this sector of economic activity²⁰. European conferences of cooperatives, mutual societies and associations were held under the auspices of the European Economic and Social Committee in 1977 and 1979 (EESC, 1986). Coinciding with its 10th anniversary, in June 1980 the CNLAMCA published a document, the *Charte de l'économie sociale* or Social Economy Charter, which defines the SE as the set of organisations that do not belong to the public sector, operate democratically with the members having equal rights and duties and practise a particular regime of ownership and distribution of profits, employing the surpluses to expand the organisation and improve its services to its members and to society (Économie Sociale, 1981; Monzón, 1987).

These defining features have been widely disseminated in the economics literature and outline an SE sphere that hinges on three main families, cooperatives, mutual societies and associations, which have recently been joined by foundations. In Belgium, the 1990 report of the Walloon Social Economy Council (CWES)²¹ saw the SE sector as being the part of the economy that is made up of private organisations that share four characteristic features: "a) the objective is to serve members or the community, not to make a profit; b) autonomous management; c) a democratic decision-making process; and d) the pre-eminence of individuals and labour over capital in the distribution of income".

The most recent conceptual delimitation of the SE, by its own organisations, is that of the *Charter of Principles of the Social Economy* promoted by the European Standing Conference on Cooperatives, Mutual Societies, Associations and Foundations (CEP-CMAF)²², the EU-level representative institution for these four families of social economy organisations. The principles in question are:

- The primacy of the individual and the social objective over capital
- Voluntary and open membership
- Democratic control by membership (does not concern foundations as they have no members)
- The combination of the interests of members/users and/or the general interest
- The defence and application of the principle of solidarity and responsibility
- Autonomous management and independence from public authorities
- Most of the surpluses are used in pursuit of sustainable development objectives, services of interest to members or the general interest.

¹⁹ CNLAMCA was set up on 11 June 1970. On 30 October 2001 it became the present-day CEGES (*Conseil des entreprises, employeurs et groupements de l'économie sociale* or Council of Social Economy Companies and Institutions) (Davant, 2003).

²⁰ The first time after World War II that the expression 'the Social Economy' was used in a similar sense to its present meaning was in 1974, when the journal *Annales de l'économie collective* changed its name to *Annales de l'Économie Sociale et Cooperative*, as did the organisation to which it belongs (CIRIEC: the International Centre of Research and Information on the Public, Social and Cooperative Economy). Justifying the change of name, Paul Lambert, the President of CIRIEC in 1974, pointed to "... important activities, with considerable economic repercussions, which are neither public nor cooperative: certain social security institutions, mutual societies, trades unions ..." (Annales, 1974). In 1977 Henri Desroche presented a *Rapport de synthèse ou quelques hypothèses pour une entreprise d'économie sociale* to the CNLAMCA (Jeantet, 2006).

²¹ Conseil Wallon de l'Économie Sociale (1990): *Rapport à l'Exécutif Régional Wallon sur le secteur de l'Économie Sociale*, Liège.

²² *Déclaration finale commune des organisations européennes de l'Économie Sociale*, CEP-CMAF, 20 juin 2002.

The rise of the SE has also been recognised in political and legal circles, both national and European. France was the first country to award political and legal recognition to the modern concept of the SE, through the December 1981 decree that created the Inter-Ministerial Delegation to the Social Economy (*Délégation interministérielle à l'Économie Sociale* - DIES). In other European countries, such as Spain, 'social economy' is a term that has also entered the statute book. In 2011, Spain became the first European country to pass a Social Economy Act. Greece also has a Social Economy Act and Portugal has presented a bill. The new French government which took office in June 2012 has appointed a Minister Delegate for the social economy within the Ministry of the Economy, the Treasury and Foreign Trade. At European level, in 1989 the European Commission published a Communication entitled "Businesses in the "Economie Sociale" sector: Europe's frontier-free market". In that same year the Commission sponsored the 1st European Social Economy Conference (Paris) and created a Social Economy Unit within DG XXIII Enterprise Policy, Distributive Trades, Tourism and the Social Economy²³. In 1990, 1992, 1993 and 1995 the Commission promoted European Social Economy Conferences in Rome, Lisbon, Brussels and Seville. Numerous European conferences have been held since then. The latest two were held in Toledo (May 2010) and Brussels (October 2010). In 1997, the Luxemburg summit recognised the role of social economy companies in local development and job creation and launched the "Third System and Employment" pilot action, taking the field of the social economy as its area of reference²⁴.

In the European Parliament too, the European Parliament Social Economy Intergroup has been in operation since 1990. In 2006 the European Parliament called on the Commission "to respect the social economy and to present a communication on this cornerstone of the European social model"²⁵. In 2009 the European Parliament adopted an important Report on the Social Economy that recognised the social economy as a social partner and as a key operator for fulfilling the Lisbon Strategy objectives (the Toia Report)²⁶. Very recently, the European Commission has taken two important initiatives concerning social enterprises, a set of companies that forms an integral part of the social economy: the *Social Business Initiative (SBI)* and the *Proposal for a Regulation on European Social Entrepreneurship Funds*.

For its part, the European Economic and Social Committee (EESC) has published numerous reports and opinions on the social economy companies' contribution to achieving different public policy objectives. The EESC's latest own-initiative and exploratory opinions have included one on Variety of forms of companies, which recognises the importance of the Social Economy in building Europe; one on the Social Economy in Latin America (the Cabra de Luna Opinion), which considers the role of the social economy in local development and social cohesion; and on social entrepreneurship and social enterprise²⁷. Consultation by the Commission resulted in the EESC's adopting opinions on the Social Business Initiative (SBI)

²³ The present-day DG Enterprise and Industry.

²⁴ The proposed European Constitution of some years ago also mentioned the *market social economy*, which takes its inspiration from the German *Soziale Marktwirtschaft* (Social Market Economy) concept coined by Franz Oppenheimer and popularised in the 1960s by Ludwig Erhard. The *Soziale Marktwirtschaft* lay behind the development of the German Welfare State. It proposes a balance between free market rules and social protection for individuals, as workers and citizens (Jeantet, 2006). The *Soziale Marktwirtschaft* should not be confused with the concept of the SE expounded in this Report or with the market sector of the SE, which is made up of cooperatives, mutual societies and other similar companies whose output is mainly intended for sale on the market. In the consolidation of the market social economy and the European social model, however, greater importance is increasingly being placed on the SE pillar (Report on a European Social Model for the future, 2005).

CHAPTER 3

IDENTIFICATION OF THE ACTORS OR GROUPS INCLUDED IN THE SOCIAL ECONOMY CONCEPT

- 3.1. Towards recognition of the Social Economy in national accounts systems
 - 3.2. A definition of the Social Economy that fits in with the national accounts systems
 - 3.3. The market or business sub-sector of the Social Economy
 - 3.4. The non-market sub-sector of the Social Economy
 - 3.5. The Social Economy: pluralism and shared core identity
-

3.1. Towards recognition of the Social Economy in national accounts systems

The national accounts systems perform a very important function in providing periodic, accurate information on economic activity, as well as in working towards terminological and conceptual harmonisation in economic matters to enable consistent, meaningful international comparisons to be drawn. The two most important national accounts systems currently in force are the United Nations' *System of National Accounts* (1993 SNA) and the *European System of National and Regional Accounts* (1995 ESA or ESA 95). The 1993 SNA gives national accounting rules for all the countries in the world. The 1995 ESA applies to the member states of the European Union and is fully in line with the 1993 SNA, although there are minor differences.

The thousands upon thousands of entities (institutional units) that carry out productive activities (as defined in the 1993 SNA and 1995 ESA) in each country are grouped into the five mutually exclusive *institutional sectors* that make up each national economy: 1) non-financial corporations (S11); 2) financial corporations (S12); 3) general government (S13); 4) households (as consumers and as entrepreneurs) (S14); 5) non-profit institutions serving households (S15).

This means that, rather than the companies and organisations that form part of the SE concept being recognised as a different institutional sector in the national accounts systems, cooperatives, mutual societies, associations and foundations are scattered among these five institutional sectors, making them difficult to perceive.

The European Commission recently prepared a *Manual for drawing up the Satellite Accounts of Companies in the Social Economy (cooperatives and mutual societies)*²⁹ which will make it possible to obtain consistent, accurate and reliable data on a very significant part of the SE, that of cooperatives, mutual societies and other similar companies. Based on this Manual, at the initiative of the European Commission's DG Enterprise and Industry, satellite accounts for cooperatives and mutual societies have already been drawn up in 2011 in Spain,

²⁹ In 2003, the United Nations published a Handbook for drawing up consistent statistics on the Non-Profit sector, in accordance with the conceptual delimitation criteria established by the Non-Profit Organisation (NPO) approach. This sector includes an important group of social economy entities, largely made up of associations and foundations.

Belgium, Serbia and Macedonia. Recently this same Directorate-General has sponsored an initiative to draw up reliable statistics for social businesses³⁰.

As the SE company satellite accounts Manual says, the methods used by today's national accounts systems, rooted in the mid 20th century, have developed tools for collecting the major national economic aggregates in a mixed economy context with a strong private capitalist sector and a complementary and frequently interventionist public sector. Logically, in a national accounts system which revolves around a bipolar institutional reality there is little room for a third pole which is neither public nor capitalist, while the latter can be identified with practically the entirety of the private sector. This has been one important factor explaining the institutional invisibility of the social economy in present-day societies and, as the Commission's Manual recognises, it lies at odds with the increasing importance of the organisations that form part of the SE.

3.2. A definition of the SE that fits in with the national accounts systems

A further reason for the institutional invisibility of the Social Economy (SE) referred to above) is the lack of a clear, rigorous definition of the concept and scope of the SE that could usefully be employed by the national accounts systems. Such a definition needs to disregard legal and administrative criteria and to centre on analysing the behaviour of SE actors, identifying the resemblances and differences between them and between these and other economic agents. At the same time, it needs to combine the traditional principles and characteristic values of the SE and the methodology of the national accounts systems in force into a single concept that constitutes an operative definition and enjoys wide political and scientific consensus, allowing the main aggregates of the entities in the SE to be quantified and made visible in a homogeneous and internationally harmonised form.

Accordingly, this report proposes the following working definition of the SE:

The set of private, formally-organised enterprises, with autonomy of decision and freedom of membership, created to meet their members' needs through the market by producing goods and providing services, insurance and finance, where decision-making and any distribution of profits or surpluses among the members are not directly linked to the capital or fees contributed by each member, each of whom has one vote, or at all events take place through democratic and participative decision-making processes. The Social Economy also includes private, formally-organised organisations with autonomy of decision and freedom of membership that produce non-market services for households and whose surpluses, if any, cannot be appropriated by the economic agents that create, control or finance them³¹.

This definition is absolutely consistent with the conceptual delimitation of the SE reflected in the CEP-CMAF's *Charter of Principles of the Social Economy* (see section 2.3 of this report). In national accounts terms, it comprises two major sub-sectors of the SE: a) the market or business sub-sector³² and b) the non-market producer sub-sector. This classification is

³⁰ Proposal 46/G/ENT/CIP/12/F/S01C24.

³¹ This definition is based on the criteria established by the European Commission's Manual for drawing up the Satellite Accounts of Companies in the Social Economy and by Barea (1990 and 1991), Barea and Monzón (1995) and Chaves and Monzón (2000). It concurs both with the delimiting criteria established by the social economy organisations themselves (CNLAMCA charter, 1980; Conseil Wallon de l'Economie Sociale, 1990; CCCMAF and ESC-CMAF, 2000) and with the definitions formulated in the economics literature, including Desroche (1983), Defourny and Monzón (1992), Defourny et al (1999), Vienney (1994) and Demoustier (2001 and 2006).

³² In this Report the expression 'business' is mainly used to designate micro-economic organisations that draw their resources principally from the market (most cooperatives, mutual societies, social enterprises and other companies). It is less usual, although possible, to employ 'business' to mean other micro-

very useful for drawing up reliable statistics and analysing economic activities, in accordance with the national accounting systems currently in force. Nonetheless, from a socio-economic point of view there is obviously a permeability between the two sub-sectors and close ties between market and non-market in the SE, as a result of a characteristic that all SE organisations share: they are *organisations of people who conduct an activity with the main purpose of meeting the needs of persons rather than remunerating capitalist investors*.

According to the above definition, the *shared features* of these two sub-sectors of the SE are:

- 1) They are private, in other words, they are not part of or controlled by the public sector;
- 2) They are formally-organised, that is to say that they usually have legal identity;
- 3) They have autonomy of decision, meaning that they have full capacity to choose and dismiss their governing bodies and to control and organise all their activities;
- 4) They have freedom of membership, in other words, it is not obligatory to join them;
- 5) Any distribution of profits or surpluses among the user members, should it arise, is not proportional to the capital or to the fees contributed by the members but to their activities or transactions with the organisation.
- 6) They pursue an economic activity in its own right, to meet the needs of persons, households or families. For this reason, SE organisations are said to be *organisations of people, not of capital*. They work *with* capital and other non-monetary resources, but *not for capital*.
- 7) They are democratic organisations. Except for some voluntary organisations that provide non-market services to households, SE primary level or first-tier organisations usually apply the principle of “one person, one vote” in their decision-making processes, irrespective of the capital or fees contributed by the members. At all events, they always employ democratic and participative decision-making processes. Organisations at other levels are also organised democratically. The members have majority or exclusive control of the decision-making power in the organisation.

A very important feature of SE organisations that is deeply rooted in their history is their democratic character. Indeed, in the previously-mentioned Satellite Accounts Manual for companies in the Social Economy that are market producers (classed in the S.11 and S.12 institutional sectors of the National Accounts) the democratic criterion is considered essential for a company to be considered part of the Social Economy, as the *social utility* of these companies is not usually based on their economic activity, which is an instrument to a non-profit end, but on their purpose and on the democratic and participative values that they bring to the running of the company.

However, the working definition of the SE established in this Report also accepts the inclusion of voluntary non-profit organisations that are *producers of non-market services for households*, even if they do not possess a democratic structure, as this allows very prominent

economic organisations in the SE that principally receive their monetary resources from outside the market, in the form of donations, membership fees, property income or grants (most associations and foundations). These non-market producers also carry out an economic activity that falls within the scope of National Accounts analysis.

social action Third Sector organisations that produce *social or merit goods* of unquestionable social utility to be included in the Social Economy.

3.3. The market or business sub-sector of the SE

The market sub-sector of the SE is made up, in essence, of cooperatives and mutual societies, business groups controlled by cooperatives, mutual societies and other SE organisations, other similar companies and certain non-profit institutions serving SE companies.

As well as all the features shared by all SE entities, the working definition in 3.2 above and in the European Commission Manual emphasises three essential characteristics of SE companies:

- a) *They are created to meet their members' needs through applying the principle of self-help, i.e. they are companies in which the members and the users of the activity in question are usually one and the same.*

The European Commission's Manual gives a detailed explanation of the scope and limitations of this characteristic. The central objective of these companies is to satisfy and solve the needs of their members, who are, basically, individuals or families.

In cooperatives and mutual societies, the members and the users of the activity in question are usually (but not always) one and the same. The principle of self-help is a traditional principle of the cooperative and mutual movement. The main objective of these companies is to carry out a cooperativised or mutualist activity to meet the needs of their typical members (cooperativist or mutualist members) who are mainly individuals, households or families.

It is the cooperativised or mutualist activity that determines the relationship between the user member and the SE company. In a workers' cooperative, the cooperativised activity is employment for its members, in a housing cooperative it is building homes for the members, in a farming cooperative it is marketing the goods produced by the members; in a mutual society, the mutualist activity is to insure the members, etc.

Naturally, in order to carry out the cooperativised or mutualist activity to serve the members an instrumental activity needs to be conducted with other, non-member parties on the market. For example, a workers' cooperative sells its goods and services on the market (instrumental activity) in order to create or maintain employment for its members (cooperativised activity).

In the case of mutual societies, there is an indissoluble, inseparable relationship between being a mutualist (member) and being a policy-holder (intended recipient of the mutual's activity).

In the case of cooperatives, the member and user relationship is usual but is not always indispensable. Some classes of 'ancillary members' may contribute to the company without being users of the cooperativised activity. The examples include capital investors or former user members who are no longer users for logical, justified reasons (retirement, among others); some public bodies may even be contributing members of the company. Provided that the SE company characteristics established in the working definition hold true, including democratic control by the user members, the companies that possess these other classes of non-user contributing members will form part of the business sub-sector of the SE.

There may also be other SE companies, as is the case of social enterprises, where some members may share their objectives without strictly speaking being permanent members, although a transitory association nonetheless exists. This may even include certain volunteer activities. Nonetheless, what is usual and relevant is that in these companies there is always a reciprocal relationship, a stable bond between the company and those who participate in its activities with a certain continuity, sharing in its risks and offering some consideration in respect of membership.

The beneficiaries of the activities of SE companies also play a leading role in these companies, which constitute reciprocal solidarity initiatives set up by groups of citizens to meet their needs through the market.

This does not prevent SE companies from undertaking solidarity actions in much wider social environments, transcending their membership base. In the case of the cooperatives, their traditional rules of operation made them pioneers in applying the principle of the social responsibility of companies or corporate responsibility, as these rules stimulate and foster solidarity mechanisms (the principle of education and social action, the 'open membership' principle, the creation of reserves that cannot be divided among the members, etc.). However, all this does not alter the mutual basis of SE companies, which compete in the market, finance themselves largely through the market and conduct business entailing risks with results on which, in the final analysis, the provision of services to their members depend.

- b) *SE companies are market producers, which means that their output is mainly intended for sale on the market at economically significant prices.* The ESA 95 considers cooperatives, mutual societies, holding companies, other similar companies and non-profit institutions serving them to be market producers.
- c) *While they may distribute profits or surpluses among their user members, this is not proportional to the capital or to the fees contributed by the members but in accordance with the member's transactions with the organisation.*

The fact that they may distribute profits or surpluses to their members does not mean that they always do so. There are many cases in which cooperatives and mutual societies make it a rule or custom not to distribute surpluses to their members. Here the point is only to emphasise that the principle of not distributing surpluses to members is not an essential trait of social economy companies.

Although democratic organisation is a shared feature of all SE organisations, certain non-profit voluntary organisations that provide non-market services to families may be part of the SE despite not possessing a democratic structure, as will be seen further on.

For a company to be considered part of the SE, however, the democratic criterion is considered essential. As the European Commission's Manual says, SE companies are characterised by democratic decision-taking by the members, without ownership of the share capital determining the control of the decision-making process. In many cooperatives and mutual societies the principle of 'one person, one vote' may often be qualified, allowing some weighting of votes to reflect each member's participation in the activity. It may also happen that business groups set up by different SE companies weight the votes, not only to reflect the different degrees of activity of the members of the group but also in order to acknowledge the differences between them in terms of rank and file membership numbers. Other business groups may be set up and controlled by SE organisations to improve the delivery of their objectives for the benefit of their members, with the parent organisations controlling the decision-making processes. These groups also form part of the SE.

In some countries, certain social economy companies created by workers in order to create or maintain jobs for themselves take the form of limited or public limited companies. These too may be considered democratic organisations with democratic decision-making processes, provided that the majority of their share capital is owned by the working partners and shared equally among them.

Other social economy companies that also take a different legal form to a cooperative have been formed to conduct activities to benefit groups that are vulnerable, excluded or at risk of social exclusion. They comprise a wide spectrum of social enterprises that follow participative and democratic processes.

Accordingly, the different groups or families of agents in the market sub-sector of the social economy are as follows:

A. Cooperatives

As mentioned in the European Commission's Manual, cooperatives in the European Union are subject to very different and varied bodies of law. Depending on the country, they may be considered commercial companies, a specific type of company, civil associations or organisations that are difficult to catalogue. There may even be a total lack of specific legal regulation, obliging them to follow the rules for companies in general, which normally means commercial companies. In such cases, it is the cooperative's members who include the operating rules in the articles of association which enable a company to be identified as a 'cooperative'.

In terms of the business they conduct, cooperatives are found in both the non-financial corporations sector and the financial corporations sector and in practically every kind of activity.

In general, it would be fair to say that the vast majority of cooperatives in the European Union share a common core identity based on the historical origins of the cooperative movement and on the acceptance, to varying degrees, of the operating principles detailed in the *Statute for a European Cooperative Society (SCE)*³³.

As these operating principles adhere to each and every one of the characteristics of companies in the SE set out at the beginning of this chapter, *cooperatives are the first great business agent in the social economy*. Cooperatives are self-help organisations set up by citizens (they are private and are not part of the public sector) which are formally-organised and have autonomy of decision. In order to satisfy the needs of their members or conduct their business they operate on the market, from which they obtain their main source of funding. They are organised democratically and their profits are not distributed in proportion to the share capital contributed by their members. The 1995 ESA considers cooperatives to be market producer institutional units.

B. Mutual societies

Like the cooperatives, mutual societies in the European Union are governed by very diverse bodies of law. Depending on their principal activity and the type of risk they insure, mutual societies are divided into two large classes or categories. One group comprises mutual provident societies. Their field of activity mainly consists of covering the health and social

³³ 'Whereas' clauses 7 to 10 of Council Regulation (EC) No 1435/2003 of 22 July 2003 on the Statute for a European Cooperative Society (SCE).

welfare risks of individuals. The second group is mutual insurance companies. Their principal activity usually centres on insuring goods (vehicles, fire, third party insurance, etc.), although they can also cover life insurance related areas.

The concept of mutual society employed in the European Commission's Manual is as follows: an autonomous association of persons (legal entities or natural persons), united voluntarily for the primary purpose of satisfying their common needs in the insurance (life and non-life), providence, health and banking sectors, which conducts activities that are subject to competition. It operates according to the principle of solidarity between the members, who participate in the governance of the business, and answers to the principles of the absence of shares, freedom of membership, not exclusively profit-making objectives, solidarity, democracy and independence³⁴.

These operating principles, which are very similar to those of the cooperatives, again comply with all the characteristics of companies in the SE mentioned previously, so *mutual societies are the second great business agent in the social economy*.

However, following the European Commission's Manual, social security management bodies and, in general, mutual societies of which membership is obligatory and those controlled by companies that are not part of the Social Economy are excluded from the business sub-sector of the SE.

C. Social economy business groups

The European Commission's Manual also considers certain business groups to be SE market agents. According to the Manual, when an SE company or coalition of companies or any other SE organisation sets up and controls a business group to improve the delivery of its objectives for the benefit of its rank and file members, this group is considered an SE group, regardless of the legal form it adopts. In the European Union, there are groups that engage in agri-food, industrial, distribution and retail, social welfare and other activities. There are also SE banking and mutual society groups. They are all incorporated under different legal forms.

D. Social enterprises

In addition, the European Commission's Manual considers that the market agents in the SE include a gamut of companies with legal forms other than those of cooperatives and mutual societies but which operate according to principles that, in essence, fit the definition of social economy companies established in this report.

Among the non-financial companies, the Manual cites a variety of cases such as integration and other social action organisations that operate on the market and adopt different legal forms, in many cases as cooperatives and in others as commercial or similar companies. Generally known as *social enterprises*, they are continuously engaged in producing goods and/or services, have a high degree of autonomy and a significant level of financial risk, use paid work and are market oriented, meaning that a significant proportion of the organisation's income is derived from the market (services sold directly to users) or from contractual transactions with the public authorities. It should also be noted that they are private companies set up by groups of citizens, there is direct participation by the persons affected by the activity, their decision-making power is not based on the ownership of capital, distribution of surpluses

³⁴ <http://europa.eu.int/comm/enterprise/entrepreneurship/coop/social-cmafagenda/social-cmaf-mtuas.htm> and consultation document "Mutual Societies in an enlarged Europe", 2003 <http://europa.eu.int/comm/enterprise/entrepreneurship/coop/mutuals-consultation/index.htm>.

and profits is limited and they have the explicit object of benefiting the community (Borzaga and Santuari, 2003).

The European Commission's *Social Business Initiative (SBI)*³⁵ defines a social business as being a *social economy operator* with the main objective of having a social effect rather than generating profits for its owners or members. Social businesses operate in the market to provide goods and services in an entrepreneurial and innovative fashion. They mainly use their surpluses for social ends and their organisation is based on democratic or participative principles that aim for social justice.

In other words, *social enterprises are non-financial corporations which, irrespective of their legal status, possess the above-mentioned features of social economy companies.*

E. Other social economy companies

In some countries there are also certain non-financial corporations, set up in order to create or maintain stable employment for their members, in which the majority of shares are owned by the workers, these control the governing bodies and the company is organised on a workers' self-management basis. While these companies often take the form of public limited companies or limited companies, the workers' equity is equally divided among them, so these companies are, in fact, characterised by democratic decision-making processes and equitable distribution of profits. The best-known example of this type of company is the labour company (*sociedad laboral*) in Spain.

Non-financial corporations with majority control vested in the workers, democratic decision-making processes and equitable distribution of profits should also be included in the market sub-sector of the SE.

Lastly, in some countries the financial corporations sector includes savings and loans societies and savings banks which, in their essential aspects, fit the definition of social economy companies given in this report.

F. Non-profit institutions serving social economy entities

The only non-profit institutions which are included in this group are those serving companies in the social economy. These organisations are funded by fees or subscriptions from the group of companies in question which are considered payments for the services performed, i.e. sales. Consequently, the non-profit institutions in question are market producers and are placed in the 'non-financial corporations' sector if they serve cooperatives or similar social economy companies in this sector, or in the 'financial institutions' sector if they are at the service of credit cooperatives, mutual societies or other social economy financial organisations.

3.4. The non-market sub-sector of the Social Economy

The great majority of this sub-sector is composed of associations and foundations, although organisations with other legal forms may also be found. It is made up of all the SE organisations that the national accounts criteria consider non-market producers, i.e. those that supply the majority of their output free of charge or at prices that are not economically significant.

³⁵ Communication from the Commission SEC/2011/1278/final of 25/10/2011.

As mentioned in 3.2 above, they are *private, formally-organised entities with autonomy of decision and freedom of membership that produce non-market services for families and whose surpluses, if any, cannot be appropriated by the economic agents that create, control or finance them*. In other words, these are non-profit organisations in the strict sense of the term, since they apply the principle of non-distribution of profits or surpluses (the non-distribution constraint), and as in all social economy entities, individuals are the true beneficiaries of the services they produce.

The national accounts have a specific institutional sector, S.15, called 'non-profit institutions serving households' (NPISH), to differentiate them from other sectors. The ESA 95 defines this sector as consisting of non-profit institutions which are separate legal entities, which serve households and which are private other non-market producers. Their principal resources, apart from those derived from occasional sales, come from voluntary contributions in cash or in kind from households in their capacity as consumers, from payments made by general governments and from property income (ESA 95, 2.87).

The NPISH sector includes a variety of organisations, mostly associations, that perform non-market activities for their members (entities of a mutualist nature) or for groups of non-member citizens (general interest entities). Most of these entities operate democratically and possess the characteristic features of the SE. They include charities, relief and aid organisations, trades unions, professional or learned societies, consumers' associations, political parties, churches or religious societies and social, cultural, recreational and sports clubs.

As stated in section 3.1 above, certain voluntary non-profit organisations that are producers of non-market services for households are included in the SE under the name of *social action Third Sector* despite not possessing a democratic structure, because the services they provide free of charge are *social or merit goods* of unquestionable social utility.

NPISH that do not possess legal personality or are not very large, which the ESA 95 places in the Household sector, S.14 (ESA 95, 2.76), also form part of the SE.

Lastly, there may be other private, non-profit institutions (NPI), funded by non-financial corporations or financial corporations, that produce cultural, recreational, social etc. services which they supply free of charge to individuals. Although the 1995 ESA conventionally considers these to be serving the non-financial or financial corporations in question and therefore includes them in the respective (market) institutional sectors (ESA 95, 2.23 and 2.40), always providing that they meet the requirements set out in the definition they form part of the non-market sub-sector of the SE.

NPISH that are market producers engaged in producing non-financial market goods and services, financial intermediation, or auxiliary financial activities are excluded from this group, as are business associations funded by voluntary parafiscal fees paid by non-financial or financial corporations in return for the services they provide.

3.5. The Social Economy: pluralism and shared core identity

The SE has positioned itself in European society as a *pole of social utility* between the capitalist sector and the public sector. It is certainly composed of a great plurality of actors. Old and new social needs all constitute the sphere of action of the SE. These needs can be met by the persons affected through a business operating on the market, where almost all the cooperatives and mutual societies obtain the majority of their resources, or by associations and foundations, almost all of which supply non-market services to individuals, households or families and usually obtain most of their resources from donations, membership fees, subsidies, etc.

It cannot be ignored that the diversity of the SE organisations' resources and agents leads to differences in the dynamics of their behaviour and of their relations with their surroundings. For instance, volunteers are mainly found in the organisations of the non-market sub-sector (mostly associations and foundations), while the market sub-sector of the SE (cooperatives, mutual societies and similar companies) has practically no volunteers except in social enterprises; these are an evident example of a hybrid of market and non-market with a wide diversity of resources (monetary from the market, public subsidies and voluntary work) and of agents within the organisation (members, employees, volunteers, companies and public bodies).

This plural SE which is asserting and consolidating its part in a plural society does not signify a hotchpotch with no identity or interpretative value. On the contrary, the shared core identity of the SE is fortified by a large and diverse group of free and voluntary microeconomic entities created by civil society to meet and solve the needs of individuals, households and families rather than to remunerate or provide cover for investors or capitalist companies, in other words, by not-for-profit organisations. Over the past 200 years, this varied spectrum (market and non-market, of mutual interest or of general interest) has shaped the Third Sector, as identified here through the Social Economy approach.

CHAPTER 4

MAIN THEORETICAL APPROACHES RELATED TO THE SOCIAL ECONOMY CONCEPT

- 4.1. The Third Sector as a meeting point
 - 4.2. The Non-Profit Organisation approach
 - 4.3. The Solidary Economy approach
 - 4.4. The Social Enterprises approach
 - 4.5. Other approaches
 - 4.6. Resemblances and differences between these approaches and the Social Economy concept
-

4.1. The Third Sector as a meeting point

Although the term 'third sector' has mostly been used in the English-speaking world to describe the private non-profit sector that is largely composed of associations and foundations, 'third sector' is also used in Continental Europe and in other parts of the world as a synonym for the social economy (SE) described in the previous chapter.

In the United States of America, Levitt (1973)³⁶ was one of the first to use the expression *third sector*, identifying it with the non-profit sector³⁷. In Europe, the same term began to be used a few years later to describe a sector located between the public sector and the capitalist sector, far closer to the concept of the SE³⁸.

The Third Sector (TS) has become a meeting point for different concepts, fundamentally the 'non-profit sector' and the 'social economy' which, despite describing spheres with large overlapping areas, do not coincide exactly. Moreover, in the theoretical approaches that have been developed from these concepts, the TS is assigned different functions in the economies of today.

4.2. The Non-Profit Organisation approach

4.2.1. The Non-Profit Organisation (NPO) concept

The main theoretical approach that addresses the TS, apart from the SE approach, is of English-speaking origin, as mentioned above: literature on the Non-Profit Sector or Non-profit

³⁶ Levitt, T.: *The Third Sector – New Tactics for a Responsive Society*, Division of American Management Associations, New York, 1973.

³⁷ Coinciding with the start of research by the Commission on Private Philanthropy and Public Needs (the Filer Commission) on the economic, social and political importance of the non-profit sector, sponsored by the Rockefeller Foundation, which began in 1973.

³⁸ It was Jacques Delors who first used it in this sense, in 1979, at the University of Paris–Dauphine. Subsequently, a number of major studies on the SE (Jeantet, 2006) have been conducted under the name of the Third Sector (Defourny and Monzón, 1992) or Third System (CIRIEC, 2000).

Organisations (NPO) first appeared 30 years ago in the United States. In essence, this approach only covers private organisations which have articles of association forbidding them to distribute surpluses to those who founded them or who control or finance them³⁹.

The historical roots of this concept are linked to the philanthropic and charitable ideas that were deeply-rooted in 19th century Britain and in the countries it influenced. The renown of the British *charities* and US *philanthropic foundations* has given rise to terms such as the *charitable sector* and the *voluntary sector*, which are included in the wider concept of the Non-Profit Sector.

The modern concept of the Non-Profit Sector has been more precisely defined and disseminated widely throughout the world by an ambitious international research project which began in the early 1990s, spearheaded by Johns Hopkins University (Baltimore, USA), to discover and quantify its size and structure, analyse its development prospects and evaluate its impact on society.

The different phases of the project cover the non-profit sector in 36 countries of the five continents⁴⁰.

The organisations that this project examines are those that met the five key criteria in the 'structural-operational definition'⁴¹ of non-profit organisations. They are, therefore:

- a) *Organisations, i.e. they have an institutional structure and presence.* They are usually legal persons.
- b) *Private, i.e. institutionally separate from government, although they may receive public funding and may have public officials on their governing bodies.*
- c) *Self-governing, i.e. able to control their own activities and free to select and dismiss their governing bodies.*
- d) *Non-profit distributing, i.e. non-profit organisations may make profits but these must be ploughed back into the organisation's main mission and not distributed to the owners, members, founders or governing bodies of the organisation.*
- e) *Voluntary, which means two things: firstly, that membership is not compulsory or legally imposed and secondly, that they must have volunteers participating in their activities or management.*

4.2.2. The NPO approach in the 1993 SNA

The United Nations has published a *Handbook on Non-Profit Institutions in the System of National Accounts*⁴² (NPI Handbook). The Handbook's identification of the non-profit institutions is based on a definition of the non-profit sector drawn from Salamon and Anheier's NPO approach as described in the previous paragraph. On this basis, the NPI Handbook

³⁹ Weisbrod, B.A. (1975): "Towards a theory of the voluntary nonprofit sector in a three sector economy", in Phelps, E. (Ed.): *Altruism, morality and economic theory*, New York, Russell Sage Foundation.

⁴¹ Salamon, L.M. and Anheier, H.K. (1997): *Defining the Non-Profit Sector: A Cross-National Analysis*, Manchester and New York: Manchester University Press.

⁴² Handbook on Non-profit Institutions in the System of National Accounts (United Nations, New York, 2003).

identifies a large, heterogeneous set of non-profit organisations which can belong to any of the five institutional sectors that make up the system of national accounts, including 'general government' (S.13)⁴³. There are non-profit institutions in the 'non-financial corporations' sector (S.11), the 'financial corporations' sector (S.12) and the 'households' sector (S.14). Lastly, 'non-profit institutions serving households' or NPISH (S.15) have their own separate institutional sector in the national accounts system. These organisations take a great variety of legal forms, although the majority are associations and foundations, and are created for very different purposes: to provide services to the people or companies that control or finance them; to carry out charitable or philanthropic activities to benefit people in need; to supply non-profit market services such as health, education, leisure activities, etc.; to defend the interests of pressure groups or the political programmes of like-minded citizens, etc.

However, the NPI Handbook considers that such major groups as cooperatives, mutual societies, social enterprises and others do not belong within the non-profit sector.

As will be seen further on, not all the non-profit institutions that the NPI Handbook considers to lie within its scope form part of the SE concept.

4.3. The Solidary Economy approach

The concept of the *solidary economy* developed in France and certain Latin American countries during the last quarter of the 20th century, associated to a large degree with the major growth that the TS has experienced in the area of organisations that produce and distribute some of what are known as *social goods or merit goods*. Merit goods are those on which there is a broad social and political consensus that they are essential to a decent life and must therefore be made available to the entire population, irrespective of income or purchasing power. Consequently, it is considered that government should provide for the production and distribution of these goods, whether ensuring that they are provided free of charge or subsidising them so that they may be obtained at well below market prices.

During the height and consolidation of the Welfare State, universal enjoyment of the most important of these merit goods, such as health services and education, has been guaranteed by the governments of most of the developed societies in Europe. In recent decades, however, *new social needs* have emerged that neither the public sector nor the traditional capitalist sector are solving and which affect numerous groups at risk of social exclusion. These problems are related to the living conditions of elderly people, mass long-term unemployment, immigrants, ethnic minorities, the handicapped, reintegration of ex-prisoners, abused women, the chronically ill, etc.

It is in these areas that the some organisations which are typical of the SE (cooperatives and, above all, associations) have seen considerable expansion. This sector simultaneously brings together a set of new organisations and new fields of action. Compared to the classic SE agents, it presents three distinctive features: a) the social demands it attempts to address, b) the actors behind these initiatives and c) the explicit desire for social change⁴⁴.

Based around these three aspects, the concept of the *solidary economy* developed in France from the 1980s onwards. It corresponds to an economy in which the market is one component, possibly the most important, but not the only one. The economy revolves around

⁴³ The NPI Handbook considers some organisations that the 1993 SNA includes in S.13, the 'general government' sector, to be 'quasi-non-governmental organisations', i.e. self-governing and institutionally separate from government (NPI Handbook paragraphs. 2.20 and 2.22).

⁴⁴ Favreau, L. and Vaillancourt, Y. (2001): "Le modèle québécois d'économie sociale et solidaire", *Revue internationale de l'économie sociale*, n° 281.

three poles: the market, the State and reciprocity. These three poles correspond to market, redistribution and reciprocity principles⁴⁵. The latter refer to a non-monetary exchange in the area of primary sociability that is identified, above all, in associationism⁴⁶.

In short, the economy is plural in nature and cannot be reduced to strictly commercial and monetary terms. The solidary economy approach is an unprecedented attempt to hook up the three poles of the system, so specific solidary economy initiatives constitute forms that are hybrids between the market, non-market and non-monetary economies. They do not fit in with the market stereotype of orthodox economics⁴⁷ and their resources, too, have plural origins: market (sales of goods and services), non-market (government subsidies and donations) and non-monetary (volunteers).

As well as this concept of the solidary economy, which has its epicentre in France, another view of the solidary economy with a certain presence in some Latin American countries sees it as a force for social change, the bearer of a project for an alternative society to neo-liberal globalisation⁴⁸. Unlike the European approach, which considers the solidary economy to be compatible with the market and the State, the Latin American perspective is developing this concept as a global alternative to capitalism.

4.4. The Social Enterprises approach

A considerable body of works on social enterprises has appeared in recent years, although it cannot be said to take a unified approach. However, two main approaches to social entrepreneurship can be distinguished: the Anglo-American approach and that of Continental Europe.

In turn, the Anglo-American sphere comprises various currents that define the social enterprise sphere differently, ranging from those who consider social enterprises to be the market company counterpart of private non-profit organizations with a social purpose to those whose definition of a social enterprise centres exclusively on social innovation and satisfying social needs, whatever the form of ownership of the enterprise (public, private capital-based or what is understood by the term social economy in Europe)⁴⁹.

In the Continental European tradition, the main approach to social enterprises is summarised in the studies and proposals of the EMES network, which sees these companies as the result of collective entrepreneurship in the social economy sphere and as defined by three blocks of indicators (in the economic, social and governance structure dimensions). The European Commission, in the *Social Business Initiative* mentioned earlier, also defined social enterprises as a sub-set of the social economy (*social economy operators*).

4.5. Other approaches

⁴⁵ Polanyi, K. (1983): *La Grande Transformation*, Gallimard, Paris.

⁴⁶ Laville, J.L. (1994).

⁴⁷ Eme, B.; Laville, J.L. (1999): “Pour une approche pluraliste du tiers secteur”, *Nouvelles Pratiques Sociales*, Vol. 11-12, N° 1-2.

⁴⁸ Boulianne, M. et al (2003): “Économie solidaire et mondialisation”, *Revue du Mauss*, N° 21, Paris.

⁴⁹ A comparative analysis of the European and American approaches to social enterprises can be found in Defourny, J. y Nyssens, M., 2011, “Approches européennes et américaines de l’entreprise sociale : une perspective comparative”, *Revue internationale de l’économie sociale*, n° 319 and in *Ciriec-España, revista de economía pública, social y cooperativa*, n° 75, a special issue on “Social Economy and Social Enterprises”, 2012.

Related to the approach described in the previous paragraph, other theoretical developments directly propose replacing market economies where the means of production are privately-owned with other ways of organising the production system. They include: a) the *alternative economy*⁵⁰, with roots in the anti-establishment movements that developed in France after May 1968; b) the *popular economy*, promoted in various South American countries since 1980 with very similar views to the Latin American version of the solidary economy, so much so that it is also termed the *solidary popular economy*. The popular economy excludes any type of employer/employee relationship and considers work the main factor of production⁵¹.

4.6. Resemblances and differences between these approaches and the Social Economy concept

Section 3.5 explained how the SE concept established in this report not only sees the SE as being part of a plural economy and society but also as itself being composed of a great plurality of actors. From this point of view, the solidary economy approach not only presents important elements of convergence with the SE approach, from the practical point of view it may also be asserted that absolutely all the organisations that are considered part of the solidary economy are also unquestionably part of the SE. The same may be said of other theory developments such as the *social usefulness third sector* (Lipietz, 2001), *social enterprise* (Borzaga and Defourny, 2001) or *new social economy* (Spear, Defourny et al, 2001). In the same way as most of the associative experiences included in the *alternative economy* or the *popular economy*, all of these constitute partial elements of the same group, certainly multi-faceted but possessing a shared core identity and a personality that differentiates it from the other institutional sectors in the economic system.

As regards the social enterprises approach, it must be emphasised that the concept of the social economy is far broader than that of social enterprise, as the latter forms only a small part of the former: the social economy is made up of a wide range of operators which taken all together constitute a pole of social utility between the public sector and the capital-based sector. In the European approach, all social enterprises form an integral part of the social economy, but most social economy enterprises do not form part of the group of social enterprises.

Because of their importance, it is worth pausing to examine the main resemblances and differences between the SE approach and concept and that of the NPO approach.

As regards the resemblances between the SE and the NPO approaches, of the five criteria that the NPO approach establishes to distinguish the TS sphere (see 4.2.1) four are also required by the SE approach (section 3.1): *private, formally organised* organisations with autonomy of decision (self-governing) and *freedom of membership* (voluntary participation).

However, there are three TS delimitation criteria where the NPO and SE approaches clearly differ:

a) the non-profit criterion

In the NPO approach, all the organisations that distribute profits, in any way, to the persons or organisations that founded them or that control or fund them are excluded from the TS. In other words, TS organisations must apply the principle of non-distribution of profits or

⁵⁰ Archimbaud, A. (1995): "L'Économie alternative, forme radicale de l'économie sociale", *Revue des études coopératives, mutualistes et associatives*, N° 256.

⁵¹ Coraggio, J.L. (1995): *Desarrollo humano, economía popular y educación*, Instituto de Estudios y Acción Social, Buenos Aires; and Razeto, L. (1993): *Empresas de trabajadores y economía de mercado*, PET, Chile.

surpluses (the non-distribution constraint) strictly (see section 4.2.1. above). As well as not distributing profits, the NPO approach demands that TS organisations be not-for-profit, in other words, they may not be created primarily to generate profits or obtain financial returns (NPI handbook, paragraph 2.16).

In the SE approach, the non-profit criterion in this sense is not an essential requirement for TS organisations. Naturally, the SE approach considers that many organisations which apply the non-profit criterion strictly belong in the TS: a broad sector of associations, foundations, social enterprises and other non-profit organisations serving persons and families that meet the NPO non-profit criterion and all the SE organisation criteria established in this report (section 3.1). However, cooperatives and mutual societies, which form a decisive nucleus of the SE, are excluded from the TS by the NPO approach because most of them distribute part of their surpluses among their members⁵².

b) the democracy criterion

A second difference between the NPO approach and the SE approach is the application of the *democracy criterion*. The NPO approach's requirements for considering that an organisation belongs to the TS do not include such a characteristic element of the SE concept as democratic organisation. Consequently, in the NPO approach the TS includes many, and very important, non-profit organisations that do not meet the democracy criterion and which, therefore, the SE approach excludes from the TS. In effect, many non-profit institutions in the non-financial corporations and financial corporations sectors sell their services at market prices and do not meet the democratic organisation principle. These non-profit organisations that are considered part of the TS by the NPO approach and not by the SE approach include certain hospitals, universities, schools, cultural and art bodies and other institutions which do not meet the democracy criterion, sell their services on the market and meet all the requirements established by the NPO approach.

The SE approach generally excludes from the TS any non-profit entities that do not operate democratically although, as pointed out in section 3.2 of this report, it is accepted that voluntary non-profit organisations which provide non-market services to persons or families free of charge or at prices which are not economically significant can be included in the SE. These non-profit institutions prove their *social usefulness* by providing merit goods or services free to individuals or families.

c) the criterion of serving people

Finally, a third difference lies in the intended recipients of the services provided by the TS organisations, as their scope and priorities differ between the NPO and the SE approaches.

⁵² The SE approach includes an important current that considers cooperatives and mutual societies to be non-profit in both senses: that of applying the non-distribution constraint among their members and that of being *not-for-profit*, i.e. set up primarily to provide a particular service to their members rather than to obtain financial returns. As regards the application of the non-distribution constraint, this considers that the members only receive part of the surpluses in the form of 'cooperative refunds', which constitute yields generated by the members themselves by engaging in cooperativised transactions with the cooperative, so these surpluses are not considered profits. Nor do members receive any profit when their contributions to the share capital are liquidated, as they are repaid at nominal value, although possibly updated to maintain their purchasing power. If the cooperative is dissolved, the net assets after settling up the debts, including the members' contributions to the share capital, cannot be distributed among the members. As regards the second meaning of the non-profit criterion, it is generally accepted in the SE approach that cooperatives and mutual societies, together with other TS organisations, are not-for-profit bodies, i.e. they are set up to solve needs and offer services to individuals, households or families rather than to remunerate or provide cover for investors or capitalist companies. On this debate see Chaves and Monzón (2001).

In the SE approach, the main aim of all the organisations is to serve people or other SE organisations. In first-tier organisations, most of the beneficiaries of their activities are individuals, households or families, whether as consumers or as individual entrepreneurs or producers. Many of these organisations only accept individuals for membership. On occasion they may also allow legal persons of any type to become members, but in all cases the SE's concerns centre on human beings, who are its reason for being and the goal of its activities.

The NPO approach, on the other hand, has no criterion of considering service to people as a priority objective. Non-profit organisations can be set up both to provide services to persons and to provide them to corporations that control or fund them (NPI Handbook, paragraph 2.21). There may even be first-tier non-profit organisations composed exclusively of capital-based companies, whether financial or non-financial. As a result, the field analysed by the NPO approach is very heterogeneously defined.

In conclusion, the above resemblances and differences between the NPO and SE approaches, together with the existence of a shared space composed of organisations included by both, make it possible to appreciate important conceptual and methodological divergences which do not allow the TS to be configured by simply adding together the groups of organisations considered by the two approaches.

Concerning the differences between the two approaches as regards the functions that the TS can perform in developed economies, so far as the NPO approach is concerned *the TS lies between the State and the market*⁵³ and the mission of its most characteristic nucleus (the social third sector) consists in satisfying a considerable quantity of social needs that are not being met either by the market (due to a lack of solvent demand with purchasing power) or by the public sector (as public funding is incapable of doing so), making it essential to turn to a third type of resources and motivations. The Anglo-Saxon concept, based on *volunteers*, *charities* (in Britain) and *foundations* (United States), insists on the values of philanthropy and the non-profit criterion.

The lack of profitability of the work carried out demonstrates the purity and rectitude of the motives that underlie it and confirms membership of the TS, which thereby shows its *charitable* and *welfare* nature, with its mission being to palliate the shortcomings of an ungenerous public social protection system and the excesses of a market system that is more dynamic but also more implacable than any other system⁵⁴ towards less solvent social sectors.

For the SE approach, the TS is not located between the market and the state but *between the capitalist market and the public sector*⁵⁵. From this point of view, in developed societies the TS is positioned as a *pole of social utility* made up of a broad set of private organisations that are created to meet social needs rather than to remunerate capitalist investors.

At all events, the concept of the TS developed by the SE does not consider it a residual sector but an institutional pole of the system which, together with the public sector and the capitalist private sector, is a key factor for consolidating welfare in developed societies by helping to solve some of their most prominent problems, such as social exclusion, large-scale long-term unemployment, geographical imbalances, local self-government and fairer income and wealth distribution, among others.

⁵³ Salamon, L.M. and Anheier, H.K. (1997), Powell (1987).

⁵⁴ Caille (2003): "Sur les concepts d'Économie en général et d'Économie Solidaire en particulier", *Revue du Mauss*, N° 21, p. 215-236.

⁵⁵ Defourny, J. and Monzón, J.L. (1992): *Économie Sociale. Entre économie capitaliste et économie publique*, De Boeck-Wesmael, Bruxelles.

Unlike the NPO approach, which only sees a charitable and philanthropic function in the TS, developing uni-directional solidarity initiatives, the SE promotes business initiatives with reciprocal solidarity among its initiators, based on a system of values where democratic decision making and the priority of people over capital in the distribution of surpluses prevail.

The SE does not just see people in need as the passive beneficiaries of social philanthropy, it also raises citizens to the status of active protagonists of their own destiny.

CHAPTER 5

COMPARATIVE ANALYSIS OF THE PREVAILING DEFINITIONS RELATING TO THE CONCEPT OF THE SOCIAL ECONOMY IN EACH EUROPEAN UNION MEMBER STATE

5.1. Concepts prevailing in each country

5.2. The Social Economy actors in the member states of the European Union

5.1. Concepts prevailing in each country

The social and economic reality which in this work we refer to as the ‘Social Economy’ is widespread and in evident expansion throughout the European Union. However, this term as well as its scientific concept is not unambiguous across all the different countries of the Union, in some cases, not even within a single country, usually coexisting with other terms and similar concepts. The purpose of this section of the work is precisely to shed light on the diversity of concepts and terms existing in Europe to refer to this reality.

In the previous context, part of this research has been directed, on the one hand, to assessing the level of recognition of the Social Economy in three important spheres, that is, that of the public administrations, the academic and scientific world and the Social Economy sector itself in each country, and on the other hand, to identify and assess other similar concepts. This work has been carried out in accordance with the methodology used in chapter 1 or the work *The enterprises and organizations of the third system. A strategic challenge for employment* (Vivet and Thiry in CIRIEC, 2000) in which the third system was assimilated into the Social Economy.

The gathering of information from primary sources has been based on the semi-open question targeted at our correspondents (see appendix), all of whom are privileged witnesses and have expert knowledge of the concept of Social Economy and similar ones and of the reality of this sector in their countries. The questionnaire contained semi-closed questions concerning the Social Economy and similar notions in the different countries of the Union. The correspondents are university researchers, professionals from the federative and representative structures of the sector in the countries and top officials from the national public administrations with powers in the field of the Social Economy. The degree of recognition has been divided into three relative levels across the different countries: (*) when there is scant or no acceptance of this concept; (**) when there is a medium level of acceptance; and (***) when there is a high level, denoting in this latter case an institutionalized acceptance of the concept of the Social Economy in the country of reference.

The results appear in tables 5.1. and 5.2. relating respectively to the level of recognition of the concept (and its term), the Social Economy; to the recognition of similar concepts ‘Social Enterprises’, ‘Non-profit sector’ and ‘Third sector’ and finally to the recognition of other concepts.

Notes: Questionnaire question: Could you tell us whether the concept of “Social economy” is recognized in your country?

Even assuming the existence of national realities and theoretical ideas for the same term ‘Social Economy’, markedly different, hardly comparable, from the data obtained in the field work, three groups of countries have been identified using the level of recognition and acceptance of the concept Social Economy (see table 5.1.):

- *countries in which the concept of the Social Economy is widely accepted:* In Spain, France, Portugal, Belgium, Ireland and Greece, the concept of Social Economy enjoys greater recognition by the public administrations and by the academic and scientific world, as well as the Social Economy sector itself in these countries. Most of them have now laws or projects of laws on Social Economy (see Table 7.4). The first two countries stand out, especially France, which is the birthplace of this concept, and Spain, which has approved the first European national law on Social Economy in 2011.

- *countries in which the concept of the Social Economy enjoys a medium level of acceptance:* These are Italy, Cyprus, Denmark, Finland, Luxembourg, Sweden, Latvia, Malta, Poland, the

United Kingdom, Bulgaria and Iceland. In these countries the concept of the Social Economy coexists alongside other concepts, such as the Non-profit sector, the Third Sector, the Voluntary sector and Social Enterprises. In the United Kingdom, the low level of awareness of the Social Economy contrasts with the Government's policy of support for social enterprises.

- *countries with scant or no recognition of the concept of the Social Economy:* The concept of the Social Economy is little known, incipient or unknown by a group of countries composed of Austria, the Czech Republic, Estonia, Germany, Hungary, Lithuania, the Netherlands, Slovakia, Rumania, Croatia and Slovenia, a group which mainly comprises Germanic countries and those which joined the European Union from the latest enlargement. The related terms Non-Profit Sector, Voluntary Sector and Non-Governmental Organisations sector enjoy a greater level of relative recognition.

In the rest of the tables in this work the presentation of information by country follows two criteria: firstly, the criterion of differentiating the reality of the 12 new countries of the European Union and the two candidate countries, a central goal of this work; secondly, that of differentiating the reality of the 15 older member states.

Note: Questionnaire item: Which other concepts related to “Social Economy” enjoy scientific, political or social recognition in your country?

In Finland, the Netherlands, Sweden, Italy and Poland the concept of Social Enterprises is widely accepted. Finland passed a law on Social Enterprises in 2003, Italy in 2005, and a bill has been drawn up in the Netherlands. In addition to the concepts of the Social Economy, Non-profit Sector, Social Enterprises and Third Sector, other widely accepted notions coexist in several European Union countries. In countries such as the United Kingdom, Denmark, Malta and Slovenia, the concepts of Voluntary Sector and Non-Governmental Organisations, more closely related to the idea of Non-profit Organisations, would appear to enjoy wide scientific, social and political recognition. Confined to the French-speaking European countries (France, the Walloon Region of Belgium and Luxembourg⁵⁶), the concepts Solidarity Economy and Social and Solidarity Economy are also recognized, while the notion of *Gemeinwirtschaft* (General Interest Economy) is known in German-speaking countries such as Germany and Austria.

It is important to point out that several countries do not recognise certain components of the social economy, in the broad sense of the term, as integral parts of this wide social sector. On the contrary, they are considered idiosyncratic and isolated. This is the case of cooperatives in countries such as Germany, the United Kingdom and Latvia.

5.2. The Social Economy actors in the member states of the European Union

In the light of the situation outlined in the previous section of this same chapter, which highlights the marked diversity of national realities concerning the concepts and the level of recognition of the Social Economy and related concepts, it is obviously not easy to identify the components of the Social Economy in each country. The task is to identify what institutional forms make up the field of the Social Economy or the related term which each country best recognises.

The result of the study, having consulted the expert national correspondents, is shown in Table 5.3.

Three main conclusions may be drawn. The first, basic one is that the components vary significantly from one country to another, as there are genuine national forms which the experts consider integral to the Social Economy in their countries (see X1, X2, etc.). In some countries, such as Italy and Spain, there are divergent concepts of the scope of the social economy: a business concept of the social economy that sees it as consisting mainly of cooperatives coexists with a non-market concept that sees it as largely comprising associations, social cooperatives and other non-profit organisations.

A second conclusion is that the well-known notion of the Social Economy as bringing together Cooperatives, Mutuals, Associations and Foundations is the most widespread in the group of countries where the concept of the Social Economy is most accepted, with the exception of Ireland.

A third conclusion is the general consensus that cooperatives are components of the Social Economy. This corroborates the fairly widespread belief that cooperatives and mutuals are the prototype enterprises of the Social Economy. Associations, Foundations and Social

⁵⁶ In France the new socialist government has created a *Ministère délégué chargé de l'Economie sociale et solidaire* and in Luxembourg there is a *Plateforme de l'économie sociale et solidaire* [Social and Solidary Economy Platform].

Enterprises are also considered components. The explanation for the exclusion of Friendly Societies (mutuals) from the sphere of the Social Economy in the new Member States of the European Union may be found in the low level of recognition of the very concept of the Social Economy itself, together with the absence of a legal status establishing mutuals in these countries.

X16: Unitati Autorizate Proteiate (Authorized Protected Units)

X17: Sheltered workshops, social services

The platforms and networks of the Social Economy in Europe

Social organisations have a natural tendency to form groups based on shared economic and political affinities and interests.

Some of the social economy business groups and networks that have been built up in the interests of competitiveness are veritable European corporate giants⁵⁷.

Groups have also been formed in the political sphere, in what some have named the ‘European civil society’ of the Social Economy (see DIESIS, 2008). The social economy in Europe has set up many organisations that act as its representatives. Through these, it has taken part in drawing up and implementing national and European Union policies when these processes have made space for participation by this type of social interlocutor.

In the different European countries, the associations that represent social economy companies and organisations have mainly been formed with a sector perspective, giving rise to organisations, associations and platforms that represent credit, workers' and agricultural cooperatives, among others, mutual insurance companies, provident societies and associations and other social action non-governmental organisations.

This process has also taken place at European level, where the social economy (whether the 'families' within it or as a whole) has historically had a part in the different Community policies. This has been evident since the year that the Treaty of Rome was signed, when Eurocoop, the organisation that represents the consumers' cooperatives of Europe, was founded, and in the development of the Common Agricultural Policy with the assistance of the General Confederation of Agricultural Cooperatives in the European Union (COGECA)

Nowadays, the organisations that represent the social economy in Europe are:

1. Cooperative family:

- EUROCOOP: European Community of Consumer Cooperatives
- CECODHAS: European Liaison Committee for Social Housing — cooperative section
- CECOP: European Confederation of Workers' Cooperatives, Social Cooperatives and Participative Enterprises
- COGECA: General Confederation of Agricultural Cooperatives
- GEBC: European Cooperative Banking Group
- UEPS: European Union of Social Pharmacies

⁵⁷ See the world's major cooperatives and mutual businesses at <http://global300.coop>.

Cooperatives Europe⁵⁸ is the umbrella organisation of all these representative bodies of the European cooperatives.

2. Mutual society family:

- AIM: International Association of Mutual Societies
- AMICE - Association of Mutual Insurers and Insurance Cooperatives in Europe⁵⁹

3. Association and social action organisation family:

- CEDAG: European Council of Associations of General Interest
- EFC: European Foundation Centre
- European Platform of Social NGOs

4. Platforms for Social Enterprises:

- CEFEC: Social Firms Europe, the Confederation of European Social Firms, Employment Initiatives and Social Cooperatives

Most of these European-level representation organisations are in turn members of SOCIAL ECONOMY EUROPE⁶⁰, the European Standing Conference on Cooperatives, Mutual Societies, Associations and Foundations, which is currently the highest-level European social economy interlocutor for the European institutions. This platform was set up in November 2000 under the name of CEP-CMAF.

In some countries the representative associations have surpassed the sector (family) level and created intersectorial organisations that explicitly refer to the social economy. Examples of these are CEPES, the Spanish Business Confederation of the Social Economy, and the Social Economy Platform in Luxembourg.

Groupings have also followed other criteria: for instance, the past fifteen years have seen the appearance of joint networks of platforms that represent the social economy, government bodies (such as town councils) and/or companies and other social organisations that are actively encouraging the social economy. This is the case of ESMED, the Euro-Mediterranean Social Economy Network, made up of the national social economy or cooperative platforms of Portugal, France, Spain, Italy, Morocco and Tunisia, REVES, the European Networks of Cities & Regions for the Social Economy, ENSIE, the European Network for Social Integration Entreprises and FEDES - European Federation of Social Employers. CIRIEC-International⁶¹, in turn, is an unusual case of an organisation with a membership that brings organisations which represent companies from the public sector and the social and cooperative economy of many European countries together with researchers who specialise in this field.

⁵⁸ <http://www.coopseurope.coop>

⁵⁹ AMICE was created in 2008 through the merger of the two previously existing associations of mutual and cooperative insurers in Europe, AISAM and ACME.

CHAPTER 6

THE SOCIAL ECONOMY IN THE EUROPEAN UNION IN FIGURES

The purpose of this chapter is to give an overview of the main figures for the social economy in the European Union, by country and globally, differentiating three groups of organisations: cooperatives and similar accepted forms, mutual societies and similar forms and, finally, associations, foundations and other related non-profit forms.

Drawing up statistics from field studies and verifiable accounts is an essential task. However, for reasons of cost and time it exceeds the scope of this study and must be tackled at a later stage.

The statistical information provided in this study has been drawn from secondary data supplied by our correspondents in each country (see Appendix). The reference period is 2009-2010. However, for reasons of availability and of the quality of statistical reporting, the information for some countries dates from a few years earlier. The figures sought were the number of persons employed and, where possible, the full-time equivalent, number of members, number of volunteers and number of organisations or companies. For purposes of comparability with the data from the previous study carried out by CIRIEC for the EESC on the situation of the social economy in the 25-member European Union in 2002/3, particular attention has been paid to the 'employment' variable. Two specific tables (6.3 and 6.4) compare the main figures of the two studies.

In the course of this work, serious difficulties have appeared in various countries. On the one hand, particularly but not exclusively in the new EU member countries, statistical gaps have appeared and have been remedied, where possible, on the basis of information available from other studies cited in the bibliography, including those by ICMIF and AMICE, Cooperatives Europe (2010) and other umbrella organisations such as COGECA or Eurocoop. These sources have been cited systematically in the tables for the different countries. On the other hand, for some countries we found different data for the same year depending on the source and the concept of the Social Economy 'families'. Decisions have been taken based on prudence. Big efforts to systematise statistics for the different 'families' of the Social Economy must be made in coming years (as stated in Chapter 3 and in Archambault and Kaminski, 2009).

A very big difference between this study and the last EESC-CIRIEC one is that serious work has been done by some national statistical institutes in recent years to provide reliable data on the Social Economy 'families'. In Spain, Portugal, the Czech Republic and Hungary the satellite account methodology has been employed. Some other statistical institutes, such as France, supply time series on employment in the social economy. Rigorous statistics are a very important step in the recognition of the Social Economy in Europe.

Given the method employed and, particularly, the difficulties of comparing certain variables internationally, the questionable reliability of the data for certain countries, the risks of double accounting among 'families' within a single country, the different years to which they refer and the different sources for the same 'family' and country for the two periods (2002-03 and 2009-10), linked in the latter case to the availability or otherwise of data, this statistical information should be treated with caution.

The following tables concerning the reality of the social economy in the countries of the European Union are self-explanatory.

The main conclusion is that the social economy in Europe is very important in both human and economic terms: over 14.5 million paid employees, equivalent to about 6.5% of the working population of the EU-27 and about 7.4% in the 15 'older' European Union Member States. In countries such as Sweden, Belgium, Italy, France and the Netherlands it accounts for between 9% and 11.5% of the working population. These aggregates underline the fact that this is a reality which cannot and should not be ignored by society and its institutions.

The second conclusion of note is that the social economy is relatively small in the new European Union member countries, with certain exceptions, compared to the 15 'older' members. If the social economy is to develop its full potential in these countries it needs to reach at least the same levels as in other European Union countries.

The third conclusion is that the social economy has increased more than proportionately between 2002-03 and 2009-10, increasing from 6% to 6.5% of total European paid employment and from 11 million to 14.5 million jobs.

The fourth conclusion is that Associations, Foundations and Other similar forms are the main Social Economy 'family', comprising most of the social entities / enterprises and about 65% of the employment in this social sector, counting both paid and voluntary work.

(2) European Association of Cooperative Banks, 2009

(3) NCVO Workforce Almanac

Note: The narrow voluntary sector (NVS) includes all organizations in the BVS – broad voluntary sector, less organizations not traditionally thought of as being part of the voluntary sector in the U.K. This is primarily because they are seen as effectively being part of the state despite their constitutional status, and/or because they are thought not to be sufficiently altruistic or public benefit oriented. Excluded on this basis are all universities, schools, sports and social clubs, and trade union and business associations (*).

Other sources give the following data: For Cooperatives and similar, Cooperatives Europe (2009) gives 129,130 jobs, 8,434.538 members and 977 enterprises, although this refers only to cooperatives affiliated to Cooperatives Europe.

CHAPTER 7

THE LEGAL FRAMEWORK OF THE SOCIAL ECONOMY ACTORS IN THE EUROPEAN UNION COUNTRIES AND CANDIDATE COUNTRIES AND THE PUBLIC POLICIES IN PLACE, WITH SPECIAL ATTENTION TO RECENT NEW NATIONAL LEGISLATION ON THE SOCIAL ECONOMY

- 7.1. Legislation governing the Social Economy actors in the European Union
 - 7.2. Public policies towards the Social Economy in European Union countries
 - 7.3. New national legislation on the Social Economy in Europe
-

7.1. Legislation governing the Social Economy actors in the European Union

The institutional framework is a key factor in the size and visibility of the social economy. The statutory provisions defining this framework establish three types of recognition of this sector (Chaves & Monzón in CIRIEC, 2000):

- 1) Explicit recognition by the public authorities of the different identity of these organisations, which require special treatment. In this respect the objective of the legal system is to institutionalize them as private agents;
- 2) Recognition of these organisations' capacity and freedom to act in any area of social and economic activity;
- 3) Recognition of their negotiating role in the process of drawing up and applying the various public policies, viewing them as co-decision makers and co-executors of the policies.

In Europe, the different forms of the social economy do not always enjoy an adequate level of institutionalization in these three areas.

As far as the first point is concerned, not all forms of the social economy are recognised to the same extent in the legal systems of the different countries of the European Union.

In the case of the cooperatives, which are explicitly recognized in Article or Section 48 of the Treaty of Rome as a specific type of company, and also in the constitutions of various member states, like Greece, Italy⁶², Portugal and Spain, although they have a regulatory framework within which they can operate and which guarantees the rights of members and third parties there is not always a specific law at national level that regulates all cooperatives. Indeed, some countries like Denmark, the Czech Republic or the United Kingdom lack general cooperative laws, although there are some laws for specific types of cooperative, such as housing cooperatives in the case of Denmark, or credit cooperatives or credit unions in the United Kingdom and the Czech Republic. This contrasts with the situation in other countries like Spain, Italy or France, which suffer from legislative inflation in this area, with different laws according to the type of cooperative and level of government (state and regional)⁶³.

An analogous situation is found in the differences in legal status of the forms taken by the social economy in Europe, as can be seen in tables 7.1 and 7.2. Three groups of countries may be identified: The first has specific legislation for the different SE forms, the second has some

⁶² Section 45 of the Italian Constitution explicitly recognises the social role of cooperatives.

⁶³ Spain is a good example: it has a national Cooperatives Act (the latest dates from 1999) and over fifteen regional laws in the different autonomous regions.

statutory provisions covering SE organisations scattered among various laws and the third lacks any trace of legislation governing certain forms of the SE.

Notes: Questionnaire question: Do the different institutional forms of the Social Economy have a clearly differentiated legal status, e.g. a specific law?

R: indicates that this country has some statutory provisions regulating these forms of SE, although dispersed among various laws.

Shortfalls in the legislation can have serious implications as regards the legal position of groups or social entrepreneurs that wish to set up social economy organisations: the legal framework can act as a brake on the deployment of new forms if the existing ones cannot be adapted to new necessities. In this respect, the objective of the new legislation that has appeared in recent years in different countries, like the specific laws concerning social enterprises (Act of 2003 in Finland, Act of 2004 in Lithuania, Act 118/2005 in Italy and Act of 2011 in Slovenia), social cooperatives (Acts of 2006 in Poland and Portugal) and non-profit organisations of social utility (Decree 460/1997 in Italy), or the modifications to existing laws to reflect new forms (like the cooperative societies of collective interest created in 2001 in France, or the social initiative cooperatives that have appeared in recent years in the different laws concerning Spanish cooperatives), has been to provide a channel for the development of an emerging social reality.

The legislation passed in the last few years in several of the new European Union member states is particularly significant. All these are listed in Table 7.2.

Table 7.2 Other legal forms for social economy companies and organisations in Europe *

Country	Others (specify)
Belgium	- Act on “Sociétés à finalité sociale” (Social-purpose enterprises), 1995.
Ireland	- Credit Union Act, 1997.
Italy	- D.Legs. 155/2006 “Disciplina dell’impresa sociale” (Social Enterprise regulations), - Onlus (Non-Profit Organization of Social Utility), D. Lgs. n.460/1997 - Development NGO Act 49/1987 - Act 266/1991 “Legge Quadro sul volontariato” (Framework Law on Voluntary Work)
Portugal	- Misericordias DL 119/83, 25.02.83
Spain	- Sociedades laborales (Labour companies) Act 1997, - Centros Especiales de Empleo para minusválidos (special employment centre for handicapped people), RD 2273/1985), - Empresas de Inserción (Integration Enterprises): Act 12/2001 additional provision nine, regional laws.
Sweden	- Housing associations (economic associations), 30/05/1991
Finland	- Social Enterprises, 30.12.2003 - Osuuskuntalaki (Cooperative Societies Act), 28.12.2001/1488
Greece	- Act 2190/1920 applies to “Popular companies” - Acts 2810/2000 and 410/1995 for “Development Agencies” - Act 2716/1999 on Social cooperatives - Act 4019/2011 on Social enterprises

United Kingdom	- Community interest company (CIC)

* Legal status differentiated from those of cooperatives, mutual societies, associations and foundations.
Note: Questionnaire question: Do the institutional forms of the Social Economy mentioned in section 5 have a clearly differentiated legal status; for example, a specific Law? If so, please specify.

Nonetheless, legal forms do not constitute mutually watertight compartments or legislative situations without any sensitivity to the dynamism of society. Indeed, the legal 'families' often overlap: for instance, cooperative groups, federations and umbrella organisations adopt the legal form of associations and 'association with economic activity' status is used in order to operate as a cooperative in countries such as Sweden. Additionally, as well as the four most widespread and internationally recognised forms of the SE, namely cooperatives, mutual societies, associations and foundations (which, in any case, also present marked differences in the

legislation of different countries⁶⁴), each country has built up its own additional legal context covering other forms of enterprise within the SE. The wealth of legislation can be appreciated in the last column of Table 5.3 and in Table 7.2.

At the European level, the aim of the *Statute for a European Cooperative Society* was to foster this form of the social economy, not only by improving the European cooperatives' possibilities of conducting transnational activities but also, above all, by developing the sector in countries which lack cooperative legislation of their own, as in the United Kingdom, or where this legal form had been increasingly losing social prestige through being considered a vestige of the old regime, as in the new members in Central and Eastern Europe. Nevertheless, a few years after this regulation came into force, the results are not as expected⁶⁵.

Equally, the removal of the proposals for a European Mutual Society Statute and a European Association Statute from the European Commission's agenda in the past few years has been a serious setback to providing greater opportunities for these forms of the social economy to be used in Europe. In contrast, the Statute for a European Foundation is now on the European Union agenda (see section 9.3).

The specificity of the organisations in the social economy is based on certain characteristic values and principles, as discussed in the initial chapters of this Report. The purpose of the rules that govern these organisations is to reflect this specificity, laying down the principle of democratic decision-making and limitations on how profits and surpluses are distributed, for instance.

However, this specific *modus operandi* is not neutral. The use of these social economy legal forms can occasion relatively higher operating expenses for the founding groups and economic agents than in other forms of private company. The expenses entailed by the specific features of the SE organisations respond to their internalisation of their social costs, which are linked to the democratic decision-making process, the surplus allotment method and the nature of the goods and services produced, which are basically of social and/or general interest, compared to the externalisation of private costs by traditional for-profit private companies.

These costs can appear in different forms, such as restrictions in the way surpluses and reserves are assigned, the existence of control and review bodies that certain organisations (such as cooperatives in Austria and in Germany) are obliged to join, limitations on carrying out large economic projects, as in the case of the Associative Statute in Italy, minimum numbers of members or initial capital requirements. Consequently, based on cost/benefit analyses assessing the possibilities, advantages and disadvantages, founding groups or members may be discouraged from adopting certain legal forms in favour of other forms (economists call this 'economies of choice' between legal status alternatives). These economies of choice are especially evident at times of changes in the legislation: A paradigmatic case in this respect is that of the Spanish *sociedades laborales* or labour companies, where modifications in the legislation since the beginning of the 1980s have had major consequences in terms of the creation and legal transformation of these social firms, particularly in relation to workers' cooperatives.

From the perspective of guaranteeing equal opportunities among different types of organization, and given that unequal situations call for differences in treatment, the legal framework should institute measures to compensate for the operational difficulties suffered by legal forms that afford poorer opportunities. These measures may be grants but they can also take

⁶⁴ See the comparative analyses of CECOP (2006), "Social enterprises and worker cooperatives: comparison, models of corporate governance and social inclusion", European Seminar, 9 Nov., and of the French Higher Council for Cooperation (2001).

⁶⁵ See the European Study on the implementation of Regulation 1435/2003 on the Statute for a European Cooperative Society (Cooperatives Europe, Euricse, Ezai, 2010).

the form of tax concessions. At the same time, however, lawmakers should set up suitable mechanisms to prevent certain economic agents from behaving opportunistically and taking advantage of the compensations for adopting these forms without shouldering their respective costs.

Tax treatment. In most of the Western countries of the European Union the four main legal forms taken by the social economy enjoy some specific tax treatment (see Table 7.3). Such special fiscal measures are more abundant for associations and foundations, on the grounds of their non-profit nature and of the way they assign resources and surpluses, which give priority to activities of social and/or general interest. Such legislation has been strengthened in recent years in a number of countries, such as Spain's NPO taxation system, passed in Act 43/2002, Italy's Act 460/1997 on the ONLUS or non-profit organisations of social utility and Germany's 'Social Law Code' (*Sozialgesetzbuch*) governing non-profit organisations. As regards cooperatives, many countries that have a special tax system do not extend it to all cooperatives. In Ireland, for instance, it is only applicable to credit unions, in Greece only to agricultural cooperatives and in Poland only to social cooperatives.

In these same countries, different trends in tax treatment appear at national level. While some countries such as Portugal, Italy and Spain possess consolidated special tax regimes backed by recognition of the social role of the social economy in their respective constitutions, other countries are reducing their existing specific tax treatment.

Changes in the legislation concerning cooperatives in various countries are not unconnected with this trend, as they tend to reduce the restrictions imposed by the Cooperative Principles. These changes reduce the minimum number of persons required to create a cooperative; make it possible to give some members more than one vote; loosen the limitations on activities and on trading with non-members; make it possible to issue specific bonds, representing risk or debt capital; allow third parties to participate in the share capital and allow cooperatives to transform themselves into joint-stock companies.

Quite apart from the reasons put forward for these changes in cooperative legislation, such as economic arguments concerning growth and improved competitiveness, what lawmakers undoubtedly see in these measures is lower operating costs for this legal status and, consequently, less need for special treatment, including compensatory policies and tax measures.

This is crucial because it is the main argument used by the opponents of specific treatment for cooperatives. If significant differences between different forms of enterprise are not taken into account, giving tax advantages selectively to some (such as cooperatives) can be considered unequal treatment that constitutes unlawful state aid in contravention of the free competition rules. This is how it has been interpreted by certain national courts, such as those of Italy, which referred the special tax regime for cooperatives to Europe. However, this situation was clarified recently, as on 8 September 2011 the Court of Justice of the European Union ruled on the tax exemptions for producers' and workers' cooperatives in Italy. It justified their specific tax treatment on the grounds that cooperatives are different in nature to for-profit companies.

The tax situation is very different in the new European Union member states (see Table 7.3): given the youth of the SE, the fiscal and legislative measures accompanying it are also of recent date, if they have even been passed, and concentrate above all on associations, foundations and social cooperatives.

Notes: Questionnaire question: Do the different institutional forms of the Social Economy mentioned in section 5 enjoy a more specific tax treatment than traditional private companies?

Yes*: refers only to some forms of cooperatives

Legal barriers to the development of social economy entities. The institutional framework also defines the social economy's margin for action in the different sectors of social and economic activity. Although the statutory provisions for the different forms of the social economy recognise their right to operate freely in the market like any other private agent, sector regulations can raise barriers to their entering certain fields of activity and developing freely within them.

In the case of mutual societies, three patterns of development according to economic sector are found: there are countries where mutuals can operate in numerous fields, as in the United Kingdom, where they can engage in activities ranging from water supply to sports; another group of countries confines their field of action to certain sectors, such as healthcare or health and safety cover; while the final group does not possess this legal form. Additionally, where sector rules prevent risks being mutualised, insurance cooperatives and mutual insurance societies cannot be set up.

The situation is similar for cooperatives. The ban on consumer cooperatives' operating in the pharmaceutical sector in some European Union countries is well-known. Another example is

Spain, where electricity supply cooperatives have for years been supplanted as power suppliers as a result of modifications in the regulations for the electricity sector, despite having been pioneers in satisfying this basic need in numerous regions. Legal barriers have also been raised in the petrol distribution and travel agency sectors.

In areas such as social services of public benefit and insurance, certain European Union Directives approved over the past decade have not paid sufficient attention to the specific features of social economy organisations, such as associations and foundations in the case of social services and mutual societies in the case of insurance, and consequently have had damaging effects on them.

One area where the European social economy's margin for action is most seriously affected is its business growth model. One key to the market success and growth of the social economy companies has been their capacity to form federations and cooperative groups. However, these forms of association have been queried by the European Court of Justice, being interpreted as illicit agreements contrary to free competition. Such an interpretation contrasts with the permissiveness accorded to the phenomenon of the concentration of wealth and finance in private capitalist holdings (CIRIEC, 2000).

7.2. Public policies towards the Social Economy in European Union countries

Over the last quarter of a century there have been numerous national and regional governments within the European Union which have deployed public policies with explicit references to the social economy in its entirety or to its components. In general, they have formulated *sector policies* which have included explicit references, albeit fragmentary and disjointed, to the institutional forms that make up the *social economy*. The examples include active employment policies involving workers' cooperatives and integration enterprises, social services policies where associations, foundations and other non-profit organisations have played a key role, agricultural and rural development policies in which the agricultural cooperatives have been involved, or references to mutual provident societies in the framework of social security systems. More recently, and singularly, *policies specific to the Social Economy* have emerged, some centred on businesses which operate in the market place and others aimed at non-profit organisations that operate outside the market, but seldom covering both.

The deployment of these policies in the countries of the European Union has been patchy in both its extent and its content. As pointed out in Chaves and Monzón (2000), this uneven deployment and this diversity of policies are mainly explained by the political, economic, historical, social, cultural and institutional context which is particular to each national and regional situation in which they were conceived.

More concretely, the principal elements which explain the extent and the importance of the policies really deployed, as well as the intensity and the manner of inserting the Social Economy into these policies, include the social and political recognition of this institutional reality (the Social Economy), the visibility and the image that the sector projects towards society and the policy makers in relation to the role that they play in the multi-dimensional development (economic, social, cultural) of the nation, the economic weight and the tradition of this reality, and finally, its capacity to be a worthy representative in the different processes of drawing up and applying public policies (Chaves and Monzon, 2012).

One of these factors, the role that the *social economy* can play in the multidimensional development of nations, refers back to a model of society in its ideological dimension and constitutes the cornerstone for involving the diverse social and economic forces that coexist in a country. In this respect, three principle models of society have been introduced in which the role

of the Social Economy is systematically antagonistic (Laville & Vaillancourt, 1998; Lévesque & Mendell, 1999 and Demoustier, 2001):

In the first model, *traditional social-democracy*, social aspects are covered exclusively by the State and the redistribution function. The *social economy* is considered an inheritance from the past and occupies a residual position. The social aspect, therefore, appears almost exclusively as a social problem demanding investment by the State. This is financed by taxes on capital, which is considered the prime instrument for the production of wealth.

In the second or *neoliberal model*, the economy is reduced to the market, occupied exclusively by traditional for-profit businesses, and the social aspect only refers to those who do not participate in the market economy and so constitute an insolvent demand. Here, the *social economy* not only remains excluded from the agreement on the key challenges of the economy, it also contributes to social and economic dualisation in two areas: in market activities, encouraging dependence and instability in the labour and production relations of growing segments of the population, and in non-market and redistribution activities, encouraging questioning of the State as the top regulator and redistributor and favouring philanthropy, voluntary work and the informal economy (Chaves, 2005).

In the third model, the *social and economic democracy* or *plural economy* model, the social aspect is simultaneously included in the State (redistribution) and in society: the State continues to be the main regulator and redistributor and the *social economy* operates in both market and non-market activities. In this model, encouraging the deployment of the social economy calls for adequate mechanisms to evaluate its potential to generate social added value and its limits, on the one hand, and on the other, for important socioeconomic and institutional transformations (Lévesque, 1997).

At all events, in countries where the Social Economy sector enjoys widespread social recognition (even being explicitly mentioned in national Constitutions) and a long tradition, is economically dynamic and is capable of dialoguing with the authorities, there have been numerous public policy plans in this domain for a long time. However, in countries where the political 'discovery' of this institutional sector has only been taking place recently (except for some of its components, such as cooperatives), specific measures aimed at the sector and/or employment in this sector are still rare and are often prompted by supranational systems, specifically those of the European Union (Chaves & Monzon, 2000).

Many countries in the EU have a high-level body within the national government with explicit, acknowledged responsibility for matters relating to the social economy and a name that includes the designation (brand name) of this social sector. Far from contributing to the creation of a ghetto in this section of society, the existence of this type of body constitutes an important indicator of its level of recognition and its priority on the agenda of a country's *policy makers*. In effect, it implies not only an institutional acknowledgement of the importance of this sector in society, but also a boost to its visibility and socio-political image, in addition to other effects on the political process such as information, coordination, etc. Indeed, it also constitutes a way to institutionalise specific, cross-sector policies for the social economy.

The greatest public recognition awarded to the social economy in Europe is the recent ground-breaking appointment by the socialist government in France of a social economy minister: the Minister Delegate for the Social and Solidarity Economy within the Ministry of the Economy. This government also has a Minister for sport, youth, community education and associations (Ministre des Sports, de la Jeunesse, de l'Education Populaire et de la Vie Associative). Public agencies of this type are often interministerial. However, their existence depends, in large measure, on changes and reshuffles in the governments of the respective countries.

The existence of such a body is not always a precondition for activating specific, cross-sector social economy policies. Several experiences confirm this, like those described in Chaves & Monzón (2000). Again, initiatives emerging in some of the new member countries of the Union are moving towards institutionalising specific social economy policies in spite of their lacking the above-mentioned specialized bodies. This is the case in Poland and the Czech Republic. In the former, the Polish government's National Development Plan for 2007-2013 makes repeated mention of the Social Economy as an effective instrument in the fight against poverty and social marginalisation. These mentions must be read in a context of consultation of social partners, including social enterprises and NGOs, and in the positive view the Government takes of the social economy. The situation is analogous for the Czech Republic's National Development Plan for 2007-2013. Also, the SE often makes it possible to join up different types of sector policy, such as social issues, employment and local development, hence the interest in setting up interministerial administrative units in charge of SE matters.

Nevertheless, as has already been mentioned at the beginning of this section, when the Social Economy or its components are taken into account in the governments' political agenda the reality that predominates in Europe is the sectorialised introduction of this social reality into the framework of the different sector policies, for example the employment policy of the Ministry of Labour⁶⁶ or the social services and social action policies of the Ministry of Social Affairs. This is not surprising, after all, since these sector-based policies are the public sector's response to the multiple demands and major problems in the society in question, in the same way that the appearance of the many forms of social economy are the spontaneous response of organized civil society to analogous problems in the absence of efficient answers on the part of both the public sector and the traditional private sector. In many cases the initiatives of the Social Economy precede the actions of the public sector in resolving problems and proposing creative solutions, thus revealing a potent capacity for socio-institutional innovation.

The social economy and its components are frequently, but not always, considered in State policies. Depending on their inclusion or otherwise as a protagonist in the policies, a distinction should be made between specific policies, general policies and exclusive policies. *Specific policies* are those directed exclusively at the *social economy* sector, whether the broad concept or its internal families, excluding the rest of the businesses in the private sector from their field of action. *General policies* are public policies directed at any type of business or organisation, without distinction. *Exclusive policies* are those aimed at the private sector but which exclude, explicitly (in the regulations) or economically⁶⁷, the businesses and organisations in the Social Economy. An example of an exclusive policy was, until recently, the distribution aspect of Spanish energy policy, which excluded the possibility of the cooperatives' being electricity distributors or distributing fuel in cooperative petrol stations. Another example from the same country was the exclusion of cooperatives from continuing training funds until 2005. The *concept of positive and negative discrimination towards the social economy*, in this context, is conceived as depending on whether specific or exclusive policies are applied. Institutional changes in policy conception which alter the operational mode and/or the institutional nature of the beneficiaries are measures which could favour or impede the deployment of the Social Economy in the economy as a whole.

In Europe, policies aimed at the Social Economy come in many forms. Depending on the nature of their instruments, five main types of policy can be distinguished (Chaves, 2002): institutional policies, dissemination, training and research policies, financial policies, policies of support with real services and demand policies.

⁶⁶ The study carried out by CIRIEC-International (Chaves and Demoustier (eds.) 2012) examined the role of the social economy in public policies from an international perspective.

⁶⁷ Economic exclusion is based on particular economic requirements such as company size or the ability to mobilise strategic human resources (project managers). Companies in the social sector usually find it difficult to meet the eligibility requirements for these policies.

As we said in section 7.1., institutional policies allow the businesses in the social economy space in the system, based on the institutional order in force, recognising them as players both in the economy and in the social dialogue (Vaillancourt, 2009; CIRIEC-Thiry, 2007).

Institutional policies refer also to the recognition of the Social Economy as a protagonist in the process of drawing up and applying the different public policies. In the countries where the Social Economy enjoys greater recognition there are institutional bodies for participation and social dialogue with representatives from the Social Economy. These are the economic and social councils, analogous to the European Economic and Social Committee but at State and regional level, and the State Councils on the Social Economy in Spain and France. Incipient initiatives of this type can be found in the new EU member States, like Lithuania, where the economic strategy paper explicitly points out that the social economy is a key actor, and Malta, where a White paper on “Strengthening the Voluntary sector” was published in July 2005.

Policies of dissemination, training and research are directed, on the one hand, at providing visibility and social receptiveness, and on the other hand, at developing competences in matters of training and research for the benefit of the sector as a whole. There are stable support channels for training and research that specialise in the social economy in several European countries.

The universities and federations are usually in charge of undertaking these functions. In some cases, like Sweden, Portugal, Italy, Spain and France, specialised training and research centres organised into networks have appeared. The CIRIEC International network is one of the most active. Other networks have also made an appearance, such as the EMES network, the international network of the Johns Hopkins Comparative Non-Profit Sector Project and inter-university networks in individual countries (like the German network for cooperatives, the French social and solidarity economy inter-university network, the CIRIEC-Spain network of researchers into the social economy or the Portuguese network for the third sector, among others). All of these have helped to spread the concept of the social economy and information about it throughout Europe. On the teaching side as well, post-graduate courses in the social economy have emerged in recent years at well-established university centres, most of which are linked to these networks, within the framework of the Bologna reform to create a European Higher Education Area.

Public financial policies, such as budgetary policies, directly or indirectly assign funds for the promotion and development of the Social Economy. In some cases these are public funds, like the Portuguese Prodescoop program for the promotion of cooperatives. Analogous subsidy programs to promote cooperatives and employment in cooperatives also exist in Germany, Italy, Cyprus and Spain. In other cases they are mixed or joint funds, managed by the government and by social economy organisations: examples in France are the National Fund for the Development of Associative Life (FNDVA) and the National Fund for the Development of Sport (FNDS). In various funds the funding is off-budget. In some cases, such as RAY and Oy Veikkaus AB in Finland or the ONCE in Spain, the resources are obtained from the revenue from games of chance (lotteries, slot machines). In others the funds are related to legislative change, for example by linking passive employment policies to active ones, such as the possibility of receiving unemployment benefits as a lump-sum if the unemployed person decides to set up a cooperative or a *sociedad laboral* (labour company) in Spain, or the policies to assist employment in associations and the employment cheque system in France.

The objective of support policies based on real services is to offer the sector an array of real (rather than financial) services like technical information, advice, marketing capacities, networking, restructuring and fostering the creation of second level structures, etc. These services tend to be provided by the sector federations with public funding.

General government is known to be a major consumer of goods and services offered by the private sector. In this context, the public authorities can foster social economy companies by

facilitating their access to public sector supplier status, as the authorities can be the end consumer or the intermediate consumer (in the case of social welfare services such as social, educational or health services, in which citizens are the end users). In these *demand policies*, the different modes of service provision have a direct bearing on development opportunities for the Social Economy. The services can be contracted annually between the government and the sector organisations, as in the annual contract for the type and volume of state aid subsidies covering child care, pre-school and the elderly in Portugal. They can enter into a quasi-market situation, open to competition, where the Social Economy operators have to compete with traditional for-profit private companies.

Social clauses can be established in government contracts in order to provide for social and general interest objectives. This type of clause used to be considered questionable, as a distortion of competition, but has finally been accepted by the European Union, as shown by Directive 2004/18/CE of the European Parliament and Council regarding the procedures for awarding public contracts. The member States are obliged to adapt their laws to comply with this Directive, which accepts and explicitly regulates the inclusion of social criteria in these contracts.

7.3. New national legislation on the Social Economy

Over the past ten years, various European countries have paid particular attention to law-making concerning the Social Economy. It has been during this time that debates over concept and definition, the subject of the legislation and policies to support this social sector have raged most strongly. Some of the most recent cases are Romania, Poland and France, where bills to regulate the SE have either not prospered or are being hotly debated.

The central point is the very definition of the field of the social economy, whether by this name or by that of social enterprises. Its borders are delineated very differently in the three Social Economy laws in existence, two national (Spain and Greece) and three regional (Wallonia, Bruxelles and Flanders, in Belgium). The differences are even more evident when defining the field of social enterprises, for which a greater number of laws have been enacted (see Table 7.1).

Table 7.4. Legal recognition of Social Economy or Social Enterprise Status

Country	Law	Name of the Law / Project of Law
Spain	YES	Social economy (2011)
Greece	YES	Social economy and social enterprises (2011)
Belgium (Wallonia, Bruxelles, Flanders)	YES	Social economy (2008, 2012, Décret régional)
Finland	YES	Social enterprise (2003)
Lithuania	YES	Social enterprise (2004)
Italy	YES	Social enterprise (2005)
Slovenia	YES	Social enterprise (2011)
Portugal	Bill	Social economy (2012)
Poland	Bill	Social economy (2012)
Netherlands	Bill	Social enterprises (2012)
Romania	Bill	Social enterprises (2012)
France	Bill	Solidary economy (failed)

The two national social economy laws currently in existence are from the two countries which are experiencing the crisis most deeply: Spain and Greece. The first is Spain's Law 5/2011 of 29 March 2011 on Social Economy and the second is Greece's Law 4019/2011 on Social Economy, Social Entrepreneurship and other provisions. In Belgium, the Walloon Parliament's

decree of 20.11.2008⁶⁸ on the Social Economy is similar to the Spanish law.

A paradigmatic case: the Spanish Social Economy Act (see Chaves et al, 2011)

When the Spanish parliament passed the Social Economy Act in March 2001, this country was confirmed worldwide as an example of national recognition and official policy in support of this social and economic sector. The historical roots of this policy include the two democratic constitutions of the 20th century: that of the Spanish Republic in 1931 and the Constitution of 1978 that followed the Franco dictatorship.

The Social Economy Act is a framework law, and a very short one: barely nine sections.

It pursues three great objectives:

- To establish a common legal framework for all the organisations that make up the social economy by specifying the *principles that define the field of the social economy*.
- To acknowledge the social economy as a *political operator* in this country, through its inter-sector representative organisations, including the hegemonic federation CEPES (*Confederación Empresarial Española de la Economía Social* - Spanish Business Confederation of the Social Economy). As a political operator it is a major *social interlocutor*, taking part in the process of drawing up public policies which may concern the activities of social economy enterprises.
- Introduce policies in support of the SE sector.

This Act is a public policy measure of a clearly institutional nature (see Monzón, 2009). Its main aim is to put an end to the institutional invisibility that was hindering the sector's growth. As a precondition, it also aims to end the fragmentation and atomisation of the concepts (including social economy, third sector, solidarity economy and non-profit sector) and movements involved. The Act crystallises their grouping around a concept that enjoys political, academic and social consensus: the social economy. This concept embraces an inclusive collective identity which makes it possible to bring the organisations that represent it into the institutional sphere, so they can finally be social interlocutors in their own right in the public policy making process.

It should be noted that Spain has a neo-corporatist type system in which institutional recognition of the operators is a key factor in policy construction processes.

Three dynamic processes, springing from Spain's three policy-activation levels, have led to the Social Economy Act becoming law: one is supranational (European), the second national and the third infra-national (regional).

At the European level, the European Parliament's Resolution of 19 February 2009 on the social economy (OJ 25.3.2010) should be highlighted. The social economy may well consider it the most important text to have issued from the European Parliament and the European Economic and Social Committee in the past three decades. This resolution takes the view “*that the European Union and the Member States should recognise the social economy and its stakeholders – cooperatives, mutual societies, associations and foundations – in their legislation and policies[...]*” as well as calling for other forms of institutional recognition.

A similar logic of priority action to implement institutional policies developed in Spain during the 2000s, at both regional and national level.

The different regions, called *Autonomous Communities*, enjoy wide powers and have introduced important institutional policies in support of the social economy in the past ten years. Firstly, the *Estatutos de autonomía* or statutes of autonomy – the constitutions of these regions – that have been reformed between 2006 and 2008 include specific references to the social economy and to regional government support for it. This is the case in Andalusia, Valencia, Catalonia, Castile-Leon and Aragon. Secondly, *far-reaching policy agreements* between governments and the sector, and sometimes also trade unions, have been made in a number of regions: Andalusia

⁶⁸ See Coutiez et al (2012): “Economie sociale et politiques publiques en région wallone », in Chaves & Demoustier (2012).

(2002, 2006), Murcia (2009), or the Balearic Islands (2002, 2007), for example. These events have given the sector legal substance and evidenced the political will of the regional governments to take action in this sphere.

At national level, the social economy movement, through its federation (CEPES), has followed a simple political strategy: to persuade the political parties in Parliament to give explicit recognition of the social usefulness of the social economy and the families it comprises, on the one hand, and on the other, of the need for a specific law to regulate, define and demarcate the sector and recognise it as a major operator in the mainstream political life of the country.

CHAPTER 8

THE SOCIAL ECONOMY IN A EUROPE FACING A GLOBAL CRISIS

- 8.1. The Social Economy facing conjunctural and structural crisis
 - 8.2. The Social Economy facing financial crisis
 - 8.3. The Social Economy facing the economic and employment crisis
 - 8.4. The Social Economy facing the public sector and welfare state crisis
-

8.1. The Social Economy facing conjunctural and structural crisis⁶⁹

The roots of the crisis that Europe has been experiencing in recent years lie in very profound political, social and economic processes, such as the effects of globalisation on national models of capitalism and welfare state models, the governability of Europe and intellectual paradigms of models of society. These elements provide the context of the crisis and simultaneously make it conjunctural, linked more to financial and economic problems and the public funding crisis, and more structural in nature. From either point of view, the Social Economy plays and can play an important role.

Distinguishing between a structural analysis of the economic crisis which considers it the result of the exhaustion of Fordism at the end of the 1970s and a conjunctural analysis which shows a series of shock periods that national governments have not managed to curb, it is possible both to show that the SE, alongside public intervention, directly or through the social welfare system, has provided a short-term buffer against crisis, and to envisage that the SE could be part of a structural exit from crisis if features it possesses that seem to be suitable for renewing Europe's production system are put to good use.

The SE as a buffer against the crisis. This role is envisaged for two reasons, both of them related to the specific features of its organisations: its particular rules and its social commitments.

Firstly, because of their non-profit motive, their surplus allocation rules and the double nature of their members, SE enterprises cannot be bought out because there is no market for their shares, it is difficult to relocate them because they are anchored by people empowerment, they are able to hold out because of their financial reserves, which cannot be distributed to shareholders, they are financially more flexible because of the arbitrage between immediate income and distribution of the surpluses (e.g. to shares in a workers' cooperative, to refunds in insurance cooperatives and mutual societies) and, finally, because they pursue longer-term strategies.

Secondly, their social commitments are a result of their mode of governance. Over and above simply functioning in terms of representative democracy, it allows a certain consensus in times of crisis. This consensus allows SE enterprises, internally, to enjoy flexibility in working hours and salaries, a less hierarchical salary structure and a certain job stability (with less turnover, keeping older people at work, integrating women). Externally, because people trust them, it also allows them to continue to receive donations and voluntary work, putting a brake on market recession (cooperatives have lost less ground than for-profit companies) and a brake on the restriction of public funding.

⁶⁹ We are grateful for D. Demoustier's direct assistance in drafting this section.

These arguments go back to the Share economy theory developed by Weitzman (1984). According to this theory, profit-sharing companies are defined as those in which the employees (and, by extension, worker-members), share in the profits, in the decision-making processes and in setting objectives, as in SE enterprises. Thanks to these microeconomic foundations, during economic crises they favour wage adjustment mechanisms rather than reducing their employment levels. This corrects two major classic market failures: firstly, by assigning their production resources better they achieve lower unemployment levels and, secondly, by maintaining greater business stability they manage to buffer the economic cycles. At a microeconomic level, these self-same microeconomic foundations and the group incentives they generate tend to stimulate the efforts, involvement and cooperation of employees and worker-members, the exchange of information and ideas and a willingness to make sacrifices (wages, working hours, commitment), all of which bring increased productivity, output and quality (Chaves and Monzon, 2012).

The SE as an agent of structural exit from crisis. As well as the non-financialisation of SE enterprises, the SE could be considered well suited to taking a way out of economic crisis based on a new relationship – between individuals and society, autonomy and interdependence and individual and collective responsibility –which is a feature of a higher level of knowledge and innovation (in keeping with the Lisbon strategy).

It is a knowledge economy because of its emphasis on collective learning and on competences and its internalisation of life-long learning within the economic activity (beyond formal training).

It is a relational service economy because of the co-production of services between producers and users, its mobilisation of stakeholders, and the importance it places on the relationship in the transaction.

It is an economy of functionality, owing to the "open doors" favoured by its collective ownership alongside access associated with individual ownership, to its accent not being on the product but on the function (housing, transport, food, etc.), to the greater value added to goods by services ("bunch of solutions") and to the transversality of its approach.

It is a sustainable circular economy: the SE was a forerunner in recycling and reusing goods (paper, cardboard, textiles, etc.) and increasingly invests in energy saving, renewable energies (e.g. cooperative wind farms in Denmark, Enercoop in France), eco building and rehabilitation with a decentralised production perspective.

It is evident, therefore, that the SE plays a counter-cyclical and innovative role at the present time of economic and social disruption. However, it is also showing that it can take an active part in a new, more cooperative form of socio-economic regulation (alongside administrative and competition regulations) if the authorities recognise its particularity of combining economic development and social development rather than treating them as a hierarchy, in the sense of conceiving social development as a by-product of economic development.

8.2. The Social Economy facing financial crisis⁷⁰

The key features of the financial crisis are well known. One is that in the context of capital globalization, international capital has acquired growing power and mobility, with sovereign investment funds playing a central role. This international financial context presents regulatory challenges at the local/national level. Another is that while the growing complexity of financial instruments and the very interlinking of financial institutions have shown the growing importance of regulation and certification systems (e.g. rating agencies), paradoxically, reducing

⁷⁰ With thanks for comments from R. Spear.

the regulation of the financial sector, nationally and internationally, was the key policy. When the financial crisis exploded in 2008 it was too late.

The social economy's relationship with the crisis has been different, particularly in its financial sector (see also Birchall & Hammond, 2009).

- First and foremost, it was not the social economy or its financial institutions that caused the crisis: its roots lie in social values such as avarice and rivalry, both interpersonal and between social groups, that are alien to the SE.

- Secondly, the social economy's financial institutions have suffered the impact of the financial crisis to a lesser extent, initially at least, as they were less exposed to the financial asset classes that caused the crisis and have more connection with economic activities that are tied to the local level. What has finally affected the financial sector of the social economy has been the length of the crisis and the credit crunch (see Palomo, 2010).

- Thirdly, in the current climate of credit rationing and increasing financial exclusion, the SE has demonstrated its capacity for social innovation and for responding to social demands by deploying its own alternative forms of solidarity funding, such as ethical banking, social currencies or the credit unions, which are not only providing credit but are also generating trust in its financial services.

The function of regulating the capital market is shown by the social economy's ability to achieve financial inclusion for large segments of the population who are excluded from the traditional banking sector, by its being a prime path to public funding and subsidies for people with scant resources, and by its collective control of the financial flows generated by the work and the organizations of the SE -such as salary and pensions funds, ethical and social banks, credit cooperatives and the reserves and other funds from the profitable operations of cooperatives and mutuals-. Examples of organisations that provide small loans to women and vulnerable social groups, or are more sensitive to ethical behaviour are ethical banks are Triodos Bank or the Italian Banca Etica, the French CIGALES (*Clubs d'Investisseurs pour une Gestion Alternative et Locale de l'Épargne Solidaire* or Investors' Clubs for Alternative Local Management of Solidarity Savings) or the CDFI (Community Development Financial Institutions), many of which are members of the INAISE network. Another shining example of responding to the breakdown of trust and the credit crunch has been given by credit unions in the United Kingdom. Their user membership, traditionally drawn from low income groups, has risen during these hard times of recession (Jones, 2008). Governments have not been blind to the trend and have developed new initiatives to encourage this type of social banking institutions. The British Department for Work and Pensions, for instance, has announced a £38 million investment and brought in better legislation for this purpose.

Ferri (2006), cited in Birchall and Hammond (2009), offers three reasons why credit cooperatives may be beneficial during a credit crunch. In comparison to banks, this kind of SE enterprise tends not to freeze credit, increases interest rates less and is generally more stable due to different capitalisation and lending practices.

In short, SE entities were not responsible for this international financial crisis and have not felt its impact as strongly as other financial institutions, but have maintained healthier balance sheets and continued to fulfil their function of providing credit and financial inclusion.

8.3. The Social Economy facing the economic and employment crisis

Historically, from an international perspective, it has been during times of crisis that SE organisations, particularly cooperatives, have shown the many social functions they fulfil more clearly (Birchall & Hammond, 2009). These functions have multiplied if they have had government backing.

The Social economy facing employment crisis. The social added value of the social economy is probably shown most visibly and explicitly in the regulation of the numerous imbalances in the labour market, especially in periods of crisis: unemployment, job instability and the unemployability and social and labour exclusion of the unemployed.

Historically, the social economy has contributed to creating new jobs, retaining jobs in sectors and businesses in crisis and/or threatened by closure, increasing job stability levels, bringing jobs out of the black economy into the official one, keeping skills alive (e.g. crafts), exploring new occupations (e.g. social educator) and developing routes into work, especially for disadvantaged groups and those who are socially excluded (see Demoustier in CIRIEC, 2000). In times of crisis, faced with the critical economic situation of the industrial enterprises in which they work, countless groups of workers have opted for transforming or reactivating these companies in the form of cooperatives in order to keep their jobs. Over the last few decades, statistical data have shown that the SE is a powerful job-creating sector in Europe and is more sensitive to employment than the other sectors of the economy.

The impact of the 2008-12 crisis on employment in Europe has generally been less harsh in the social economy than in traditional private companies, in view of the reports from the national correspondents of this study, although these show large disparities between different countries and sectors. In general, employment in the social economy withstood the first stage of the crisis (2008-2010) better than traditional private sector employment, although later, owing to the depth of the depression, social economy enterprises have also suffered net job losses.

In Italy, employment levels in the SE as a whole continued to rise in 2010 and 2011. This has been especially significant in the largest companies: the 106 biggest social cooperatives in this country grew from 75,828 employees in 2008 to 81,156 in 2009 and 84,243 in 2010.

In Spain, the European country with the highest unemployment rate, employment in cooperatives fell by 9% between 2008 and 2012 while salaried employment in the private sector as a whole fell by 19%, over twice as much.

The picture is similar in France. In 2010 and 2011, employment in cooperatives showed greater resilience than in the traditional private sector. Overall, their job loss was 1.7%, although it varied in different types of cooperatives. Employment fell in farm cooperatives (-3%) and workers cooperatives (-2%), but continued to rise in retail and artisans' cooperatives (+1.7% and +1.5% respectively). Mutuals are also continuing to grow (employment up by 3%), though sub-sector concentration is speeding up. Mutual insurance societies have therefore seen a slight rise in their market share.

New Social Economy organisations such as social cooperatives and other voluntary organisations, working in the so-called new employment fields such as health and social services and educational, cultural and research services, are also facing the crisis and finding difficulties in playing their social and economic role: to develop employment routes from voluntary work to paid employment by grouping working hours, exploring new services and regulating them from an employment standpoint (e.g. recognising new professions, taking the lead in setting up collective bargaining agreements, etc.), besides creating new direct employment. No less important is the capacity of the Social Economy, especially the so-called integration enterprises, the special employment centres and the social cooperatives, to achieve work integration for groups with special employability difficulties, such as physically or mentally handicapped or 'socially handicapped' people who have been out of work for long periods, have experienced downwards social and work spirals and tend to find themselves marginalised and living in poverty.

One of the main challenges that European society has had to face has been the struggle against social and labour-market exclusion in a society in which social integration is principally

achieved through paid employment. The latter not only gives people economic independence but also dignity, participation in society and access to services and facilities. For this reason, those chiefly excluded have been the social groups within the population that are less competitive, for reasons of ability, qualifications or culture, such as the physically or mentally handicapped, the long-term unemployed and certain minority groups (e.g. ethnic minorities, immigrants).

In this situation, complementing and, above all, paving the way for public action in the struggle against social exclusion, the Social Economy has demonstrated a great capacity for achieving social and labour integration for clearly disadvantaged people. This has been especially evident in the case of associations, foundations, integration enterprises and other social firms, which have reduced the levels of poverty and exclusion (CIRIEC, 2000; Spear et al., 2001).

Resilience and bankruptcy. The study by Zevi et al (2011) shows, with international examples (mostly in France, Italy and Spain), how cooperatives have generally avoided the short-term effects of the crisis more efficiently than most private traditional companies and have been better at maintaining employment levels. CICOPA (2009) shows that the job and economic *resilience* of worker and social cooperatives has been better than that of traditional companies in Europe. However, the situation varies in different countries. In Germany, according to figures from Creditreform-Datenbank, in 2010 only 0.1 % of insolvencies involved cooperative enterprises, the lowest figure of any form of enterprise (information provided by Papstein, 2012).

The Social Economy as a way out of the crisis and as a pillar of a new model of sustained economic development

Endogenous development processes. In an international context of increasing globalisation and territorial vulnerability, the capacity for mobilising endogenous economic potential, for attracting foreign companies, for anchoring the business fabric and for collectively building up new synergies for the global revitalisation of local areas becomes strategic. In this scenario, the different kinds of cooperatives (such as agricultural, worker, credit and integration cooperatives), associations and other social enterprises have proved to be basic assets.

The social economy has great potential for activating endogenous development processes in rural areas, reactivating declining industrial areas and rehabilitating and revitalising degraded urban areas, in short, for contributing to endogenous economic development⁷¹, restoring competitiveness to extensive areas, facilitating their integration at national and international level and rectifying significant territorial imbalances (Comeau et al, 2001, Demoustier, 2005).

This capacity is supported by arguments that fit the conceptual framework of the Swedish Nobel prize winner Gunnar Myrdal's economic development theory, in other words, the SE fosters development and accumulation processes at local level (*spread effects*) and minimises the *backwash effects* or regression effects:

- given their true profit and surplus distribution logic, they are more likely to reinvest profits in the areas where they were generated,
- they are able to mobilise not only the players with the best knowledge of their environment and in the best position to set suitable initiatives in motion, but also existing resources at local level,
 - they are able to create and expand an entrepreneurial culture and a business fabric,
 - they can link the generation and/or spread of economic activity to local needs (neighbourhood services) and/or to the local manufacturing infrastructure,
 - they can maintain economic activities at risk of dying out through unprofitability (e.g. crafts) or strong competition (traditional industries),
 - and they generate *social capital* in Putnam's sense, the basic institutional foundation for the creation of favourable conditions for sustained economic development.

⁷¹ See also the studies published by OECD's LEED programme (www.oecd.org/cfe/leed).

Social innovation. No less important is the role of the social economy in the processes of change in European society. This social sector's direct contact with society endows it with a special capacity for detecting new needs, channelling them to the authorities and traditional profit-making private enterprises and, where appropriate, creatively structuring innovatory responses.

In the nineteenth century, mutual aid and mutual provident societies were pioneers in responding to the needs of the new industrial society by covering health risks and were associated with the achievement of income for substantial sections of the population, shaping far-reaching social and institutional innovations which were the forerunners to the creation of public social security systems in Europe. The many ways in which these social economy organisations were linked to this process led to a profusion of social security models. (AIM, 2003). This example doubtless constitutes a reference paradigm for several of the new member states of the EU, whose societies are in the process of improving their own Welfare States (Swenner & Etheve, 2006).

More recently, innovative initiatives by what has been termed the New Social Economy have emerged: for example, as a result of the employment crisis in Europe, integration enterprises in their many legal forms (such as Italian social cooperatives) have responded imaginatively to the labour market integration problems of large groups of workers in advance of active public employment policies (as have the CIS and ZAZ in Poland and the CEE and EI in Spain).

Other examples of social innovation are the economic initiatives by citizens that have arisen with the aim of correcting the unequal terms of international trade between rich and poor countries, such as the organisations which specialise in fair trade.

However, the social economy's potential for innovation is not exhausted by the above. In the sphere of technological innovation, especially in situations where *social economy innovation systems* are structured, the generation and dissemination of new ideas and innovation has had higher success rates. A key factor of these systems is the stable alliance between the different agents of a region involved in fostering the Social Economy – such as the agencies in charge of these matters, universities, federations and the business sector of the Social Economy itself. Some examples are the ARUC partnership systems in Canada, the Mondragon Cooperative Group and the social cooperative consortia system in Italy. In short, the social economy is capable of deploying different types of innovation, which Schumpeter identifies as: product, process, market and organisational (Levesque, 2005).

This capacity for innovation has also been revealed in the field of products, particularly in social welfare services such as support services for dependent persons and social and cultural services. Neoclassical economic theory has justified the advantages of the social economy compared to the public economy and the for-profit economy by its offering this type of product, using arguments based on trust in a context of asymmetrical information among agents and on the satisfaction of heterogeneous demands and the high component of relational goods. However, this corresponds not only to its ability to structure offers that are suitable for these new unsatisfied demands but also to its ability to change values and cultures, reorienting the kind of development pursued (in the sense of consumer, production and organisational patterns).

Nevertheless, the public authorities and private institutions' funding for innovation has not been balanced. Preference has been given to financing technological innovation rather than other forms of innovation where the social economy has a greater presence.

8.4. The Social Economy facing the public sector and welfare state crisis

The crisis has had a particularly hard impact on public finances and therefore also on welfare services and the most vulnerable population groups, which have been the worst affected

by the drastic cutbacks in the levels of cover for preferential goods and services needs such as health, education and social services.

In a situation of severe public spending adjustment, the social economy enterprises closest to the public sector, because of their involvement in public markets or their being beneficiaries of grants and subsidies, have felt the public funding cuts most acutely. Similar situations were experienced in the 1980s in the United States (Salamon, 1986) and the United Kingdom, leading to a substantial reduction in the size of the non-profit sector caused by these organisations' heavy dependence on public funding.

In this era of retrenchment, in the United Kingdom, employment in the voluntary sector rose from 642,000 jobs in 2007, 2.3% of the UK workforce, to 765,000 in 2010, 2.7% of the workforce. The 40% growth in the number of jobs in this sector since 2001 shows its capacity for creating employment. Nevertheless, the financial crisis in Britain has led to drastic cutbacks in public funds for the voluntary sector in 2011 and 2012, directly affecting employment levels in these organisations (see section 8.4 below).

In France, since the end of 2010, associations have felt the effects of budget restrictions (job losses of around 0.6% between 4th quarter 2010 and 2nd quarter 2011). While social action with accommodation continued to grow (mainly obligatory expenditure by the authorities), home help, sports and cultural associations (often small) have seen their workforce begin to fall after rising rapidly for the past 20 years. Home help is an eloquent example: after strong growth (including 18,000 jobs added in 2007-2008), this sub-sector lost 5,800 jobs between the close of 2009 and June 2011, falling to the same level as at the end of 2008 (a 3.3% drop, while the private sector excluding the SSE lost 10%).

In contrast, a new social economy is currently emerging, offering social welfare in the face of the withdrawal of welfare state provision. It includes the new phenomenon of social entrepreneurship, social innovation and socially responsible enterprises. It is a reminder of the key role that mutualist organisations have historically played in the provision of social and health services and social security, generally preceding public initiatives. It may be noted that since the 1990s, the welfare state systems of various European countries have been remodelled with the intention of raising the levels of quality and access to these services. One of the aims has been to increase the presence of the private sector, particularly social economy agents, in order to achieve these goals. In the new European Union member states in Central and Eastern Europe, mutual provident societies can perform an important role in this respect, as they do in Western Europe (Swenner & Etheve, 2006).

Transforming the policy process. The introduction of the social economy into the political and economic process enables the State to benefit from the properties of the former, redounding not only to the increase of effective democracy but also to the efficiency of economic policy for several reasons (see also Enjolras, 2010):

- owing to its greater proximity and, consequently, knowledge of social problems and needs and possible solutions, involving the social economy in the design stage of economic policy increases the possibilities of 'getting it right' when choosing objectives and instruments,
- owing to its greater sensitivity towards the interests and needs of Society, the Social Economy is capable of detecting new social demands more swiftly as well as devising immediate satisfactory responses. The State can benefit from this pioneering endeavour.
- owing to its private nature and social sensitivity, it can broaden the scope of public action wherever this presents limitations, for different reasons. Two examples illustrate this phenomenon. The first is that of health and education services targeted at illegal immigrants: these services cannot be undertaken by the Administration until the rules are changed, although society approves of them. The second is the case of economic actions by the State which, although statutory, are not accepted by society (or by groups within that society) because the

power is deemed unlawful (e.g. the British government in areas of Northern Ireland). In both examples the mediation of the social economy enables the State's limits to be surpassed.

- Owing to its capacity to foster involvement and joint responsibility in society, involving the social economy in the political and economic process makes it possible to increase the degree of acceptance of economic policy measures, as these are accepted as its own when it has participated in their drafting and application; it enables the State to marshal more resources than it is able to marshal by itself and makes it possible to open up new possibilities for implementing efficient policies to re-launch demand in open economies, especially when they are carried out at local level with neighbourhood services at their centre.

- Finally, cooperation of the State with the Social Economy, given the way the latter allocates and distributes resources, can assure the former that public funds earmarked for various policies, especially social policies, are not diverted and appropriated by private interests (Vienney, 1994).

The SE could play an even more important role in future, bearing in mind the limitations that the state is encountering in providing social welfare related goods and services and the limitations and imbalances of private sector provision.

CHAPTER 9

EUROPEAN UNION POLICIES AND THE SOCIAL ECONOMY, WITH SPECIAL ATTENTION TO THE EUROPE 2020 STRATEGY: FACTS AND IMPACTS.

9.1. The Social Economy in the European Union Policies: facts and perception

9.2. The Social Economy in the Europe 2020 Strategy

9.3. Recent European Union initiatives towards the Social Economy

9.1. The Social Economy in the European Union Policies: facts and perception

The attention paid to the Social Economy by the different EU authorities has been growing over the last three decades, albeit intermittently and with differences between institutions. The important role of the social economy in the social and economic development of Europe has progressively been gaining recognition and, with this recognition, has been taking its place as a cornerstone of the Social European Model.

The long march towards institutional recognition of the Social Economy and the structuring of specific European policies started in the nineteen-eighties⁷². It culminated in 1989 with the Communication from the Commission to the Council on “Businesses in the 'Économie Sociale' sector: Europe’s frontier-free market” – which proposed the establishment, through Statutes, of a European legal basis for cooperatives, associations and mutual societies – and with the creation of the Social Economy Unit in European Commission Directorate-General XXIII. During that decade, two community institutions, the Parliament and the European Economic and Social Committee (EESC), released a succession of reports, suggestions and resolutions which highlight the social value added of the Social Economy and in both cases culminate in a landmark (Hypsman, 2003). The Parliament released reports such as those of Avgerinos on the contribution of the cooperatives to regional development, of Mihr on the role of cooperatives in building Europe and of Trivelli on cooperatives and cooperation for development, while the resolution proposed by Eyraud, Jospin and Vayssade (1984) invited the Council and the Commission to examine the possibilities of establishing a European Law of Associations. For its part, in 1986 the EESC sponsored a European Social Economy Conference, together with the Coordinating Committee of the Cooperative Associations of the Community (CCACC), and published the first European study on cooperatives, mutual societies and associations (see EESC, 1986).

From 1989 there were successive advances and certain setbacks in the recognition and deployment of policies concerning the social economy. As mentioned above, the first civil service body to specialise in the social economy was the Social Economy Unit in Directorate-General XXIII, created by the European Commission in 1989 during the Presidency of Jacques Delors⁷³. Its brief was very ambitious, given the scant financial and human resources available:

- take initiatives to strengthen the cooperatives, mutual societies, associations and foundations sector
- prepare European legislation for cooperatives, mutual societies and associations

⁷² See also Pezzini (2012): “L’*économie sociale* dans les politiques européennes”, in Chaves and Demoustier (2012).

⁷³ See <http://ec.europa.eu/enterprise/entrepreneurship/coop/social-history/social-history.htm>

- analyse the sector
- ensure the coherence of EU policy as it affects the sector
- liaise with those representative federations which exist
- establish relations with those parts of the sector which are unorganised
- raise awareness of the cooperatives, mutual societies, associations and foundations sector among decision-makers
- assess the problems the sector faces
- represent the Commission on relevant matters to the other EU institutions

The Unit was restructured in 2000, when its responsibilities were divided between two Directorates-General: the DG of Enterprise and Industry, where DG Enterprise Unit B3 – "Crafts Small Enterprises, Co-operatives and Mutuals" was created, concentrating particularly on the "enterprise aspects" of cooperatives, mutuals, associations and foundations, and the DG of Social Affairs, with responsibilities for associations and foundations.

Together with the above Units, two community institutions have been important champions of the social economy:

- the European Economic and Social Committee (EESC), a European Union consultative body. Its Group III has representatives of the social economy, who have created a 'Social Economy Category'. The EESC has been especially active in recent years and has issued several Opinions⁷⁴. The two most recent Opinions are on "Diversity of forms of enterprises" and on "Social entrepreneurship".

- the European Parliament. It first set up a 'European Parliament Social Economy Intergroup' in 1990. This intergroup was made up of members of the European Parliament and the organisations that represent the social economy in Europe⁷⁵. Prompted by the intergroup, in 2009 the European Parliament approved a very important report on "Social Economy", known as the Toia report.

In 2002 the Committee of the Regions also adopted an Opinion on "Partnerships between local and regional authorities and social economy organisations: contribution to employment, local development and social cohesion" in which it called for recognition of the social economy in regional policy.

Another body was the Consultative Committee of Cooperatives, Mutuals, Associations and Foundations (CMAF). Set up in 1998, its function was to give its opinion on the different matters concerning the promotion of the social economy at European Union level. This Committee was abolished in a Commission restructuring in 2000, but at the initiative of the sector organisations the European Standing Conference on Co-operatives, Mutual Societies, Associations and Foundations (CEP-CMAF) was immediately set up as a European platform to liaise with the European institutions. It has recently changed its name to "Social Economy Europe".

When implementing measures, the EU institutions keep meeting a two-pronged problem in relation to the social economy: its scanty legal base and its insufficient and generalized conceptual definition, contending between an absence of explicit references in the basic European Union texts (Treaty of Rome and Treaty of Maastricht) and a definition (if any) based on the legal form rather than on the activities being conducted, and between a multiplicity of terms (the Third system, civil society, etc) that hinder consensus on the designation to be employed.

⁷⁴ EESC Opinions on The social economy and the single market (2000); Ability of SMEs and social economy enterprises to adapt to changes imposed by economic growth (2004) and Economic diversification in the accession countries – role of SMEs and social economy enterprises (2004).

⁷⁵ An important initiative by the Parliament is the Report on a European Social Model for the Future (2006), which explicitly states that the social economy is the 'third pillar' of this model.

From the perspective of the legal recognition and visibility of the social economy, the principle advances have been as follows:

- European Conferences organized by Presidencies of the Council of the European Union or within the framework of a Presidency.
- Successive EESC Opinions⁷⁶, the initiatives and opinions of the European Parliament Social Economy Intergroup and in some cases also those of the Committee of the Regions, or even the Commission itself⁷⁷, have contributed to the visibility of the social sector and its components⁷⁸;
- The European Observatory for SMEs focused its 6th report (2000) on associations and foundations.
- The Statute for a European Cooperative Society (2003).
- The recent approval of the regulation on social clauses
- An increasingly favourable policy towards social enterprises (see section 9.3).

The objectives to which the social economy is linked are essentially employment, social services and social cohesion and therefore appear above all in two major lines of public policy: social and social and work integration policies and local development and job creation policies. The EU institutions' interest in involving the social economy in these objectives constitutes a fundamental advance, although it does reveal a narrow view of the SE's potential and the properties that it could generate in the economy and society of Europe.

A European budgetary policy specifically for the social economy did not get off the ground. The two attempts were unsuccessful. The first 'multi-annual programme of work for cooperatives, mutual societies, associations and foundations in the Community' (1994-1996) was intended to promote the European social economy through specific transnational projects and through taking it into account in community policies (statistics, training, research and development). Approved by the European Parliament with a budget of 5.6 million Ecus, it was rejected by the Council. The second proposal for a multi-annual programme for the social economy met the same fate. The dissention between the Council and Parliament can be seen in the selfsame 'Social Economy' budget.

The participation of the Social Economy in the budgetary policy of the European Union has been achieved through the framework of employment and social cohesion policies, specifically the pluriannual budgets to promote the SMEs and employment – like the ADAPT initiative, the EQUAL initiative for social and work integration and the Local Action for Employment and Local Social Capital programmes – and the European Social Fund (ESF), in the framework of measures to support local initiatives (sub-measure 10b), which make explicit reference to the role of the Social Economy. These explicit references are part of the recognition

⁷⁶ In 2000 the European Economic and Social Council (EESC) issued Opinion CES242/2000 DO C117 of 26.04.2000 on The social economy and the single market. This Opinion highlights that the social economy plays an essential role in business plurality and the diversification of the economy and, in consequence, suggests a battery of public support policies. Subsequently, at the request of the European Commission (14 October 2004), this same consultative body issued an Opinion on the Ability of SMEs and social economy enterprises to adapt to changes imposed by economic growth, in which it considers that the social economy plays an important role and that specific support measures need to be implemented (e.g. setting up a European Observatory for the social economy and extending the measures proposed by the OECD to the SE, among others).

⁷⁷ In 2004 the Commission of the European Communities released a significant Communication to the Council, the European Parliament, the European Economic and Social Committee and the Committee of the Regions on the Promotion of Cooperative Societies (23 February 2004, COM(2003)18).

⁷⁸ In a different international sphere, although important for Europe because it was approved by the 25 countries of the European Union, among others, as well as by most of the national employer organisations and trade unions, is the Promotion of Cooperatives Recommendation (Recommendation R193 of 2002) of the International Labour Organization (ILO).

of the Social Economy within the Lisbon Strategy framework for employment and local development.

These programmes have had a wide-ranging structuring effect, both nationally and internationally, in joining up and strengthening the European social economy in terms of federations, networks, research, culture and policies (Demoustier et al, 2006). The EQUAL programme is particularly important. It supports projects involving social economy entities, such as strengthening the national social economy (third sector), especially services for local communities and improving the quality of employment. Its projects also include lectures and debates, which are key factors for spreading the concept. It is having a decisive impact in countries such as Poland, Ireland and Austria.

At the initiative of the European Parliament, in 1997 the Commission set in motion an important pilot scheme entitled The Third System and Employment – the only substantial one specifically directed at the Social Economy – with a view to exploring and promoting the potential of the Third Sector in terms of employment. Put into operation by the Directorate-General for Employment and Social Affairs up to 2001, it established 81 projects to a value of almost 20 million Euros. It has not been continued.

After years of European policy deployment, our interest has centred on assessing the impact of these policies on the development of the social economy in Europe. Our method has been to identify key measures (the European Social Fund, the European Regional Development Fund, the LEADER initiative, European rules – directives and legislation) and trans-European congresses and networks, which our correspondents (see Appendix 1) have rated from 1 star (*) for least important to 3 stars (***) for most important in relation to the country on which they were reporting. The results are shown in table 9.1. The main conclusion is the importance of the main financial instrument, the ESF. Other highlights have been international congresses and networks, with the evident aim of raising the profile of the concept and generating structuring effects such as coordinating the civil society of Europe's social economy. Finally, directed more at the rural world, the LEADER initiative has proved a key measure.

It is hoped that these positive effects will also be seen in the new European Union member states. In this way, the Social Economy will contribute to building European and to the European project.

Notes: Questionnaire question: Which European Union policies do you think have had more impact on your country's Social Economy during the last decade?

*: Little/Not at all; **: Moderately; ***: A lot; --: Negative

Within the architecture of European policies, it is important to underline the central role of national governments in transferring the European Union policies to the member States.

Competition policy and the Social Economy in Europe. The timid advances regarding recognition and policies for the social economy at European Union level contrast with some issues, directly related to competition policy, that occupy a central position in the European Union's agenda and policies (Vosec, 2010).

These issues are:

- the barriers emanating from antitrust policies that consider the activity of the cooperatives to be 'agreements' that restrict competition and must therefore be prohibited,
- the application of competition policy in the service sector as a result of the Bolkenstein directive, which distinguishes between services of general economic interest, services of general interest that are not of an economic nature and social services of public interest. The reading of its rules that has been made to date has been seriously damaging to social enterprises and organisations.
- the tax treatment of cooperatives (see also section 7.1. of this report), a matter that some courts have considered subject to the rules on state aid, although this has recently been clarified.

9.2. The Social Economy in the Europe 2020 Strategy

In the first half of 2010, when it looked as though the worst of the current economic crisis was over, the European Commission launched the Europe 2020 strategy to achieve sustainable recovery by energetically and resolutely tapping all our society's strengths and potential. The 2020 Strategy sets out three core priorities: smart growth (developing an economy based on knowledge and innovation), sustainable growth (promoting a more resource efficient, greener and more competitive economy) and inclusive growth (fostering a high-employment economy delivering economic, social and territorial cohesion). Five specific targets were set as indicators of these priorities: increasing the employment rate from 69% to 75%; investing 3% of GDP in R&D; reducing the greenhouse effect, developing renewable energies and increasing energy efficiency; reducing the school drop-out rate; and reducing the number living in poverty by 25%. Two years on, in mid-2012, these targets are further off than they were in 2010. Poverty and unemployment in the European Union have risen (25 million unemployed) and social and territorial cohesion have not progressed.

Moreover, government policies to balance the budget at all costs are reducing social transfers and income redistribution and seriously threatening the Welfare State. Naturally, they also make it more difficult to return to the path of smart, sustainable growth.

What part can the social economy play in achieving the Europe 2020 strategy targets? The most recent studies and research, as well as empirical evidence, show the social economy's potential for achieving these objectives⁷⁹. The organisational structure of social economy enterprises and their value system explain the fact that their objective functions are a plural matrix which integrates economic and social objectives and makes them compatible with each other, so all social economy enterprises produce important macroeconomic and social benefits for society.

As regards smart growth, it has been shown that the social economy contributes to the development of an economy based on knowledge and innovation. The potential of the social economy is evident in all its organisational forms and economic activities. There are many examples of organisational or social innovation by cooperatives and other similar enterprises in

⁷⁹ See, for instance, the European Parliament's Toia Report (2009), Coen (2010), VOSEC (2010), Cooperatives Europe (2010) and Social Economy Europe (2010).

industry, agriculture, services and the financial sector. In the latter, ethical banking and microcredits have proliferated and have had an extraordinarily positive social impact.

There are remarkable innovation systems linked to specific geographical areas that fuel their own innovation chains, as in the Italian cooperative consortia, cooperative agri-food chains in a number of European countries or the well known example of the Mondragón cooperative group in Spain. The latter's innovative governance model – more participative and democratic – and its workers' greater commitment to the company as a result of shared ownership have been shown to create competitive advantages in the marketplace that help it withstand the economic crisis better.

In terms of sustainable growth, social economy enterprises have value systems that translate into solidarity with their surroundings, internalising social costs and generating positive externalities. In the case of cooperatives, which accumulate indivisible assets and apply the "open doors" principle, solidarity is also exercised over time, down the years, as these funds provide future generations with productive wealth that enables them to follow a path of sustainable growth. The Mondragón group is a good example. Unlike capital-based companies that often relocate their production, impoverishing the areas they leave, in the past 4 years the Mondragón cooperatives which have internationalised, employing multi-location production strategies, have seen net employment in their factories in the Mondragón area itself rise by 10%.

As regards employment targets, the empirical evidence proves that the social economy contributes effectively to combating unemployment, job instability and social and work exclusion among vulnerable groups. In countries such as Italy, worker cooperatives have maintained high employment levels, far higher than in traditional private companies, during the recent years of crisis.

In the specific area of combating poverty and social exclusion, the rise of social enterprises has been remarkable, not only in Northern and Southern Europe but also in the new EU member states in Central and Eastern Europe. It should be remembered, however, that it is not only social enterprises but all social economy enterprises, whatever their line of business, that make an effective contribution to inclusive growth. The social usefulness of social economy enterprises does not arise out of their specific production activity but out of their organisational system and values, in that the rights of the person prevail over those of capital and mechanisms are in place to ensure the equitable distribution of the income and wealth they generate.

It is evident that the social economy as a whole is performing an indispensable role in building Europe and can contribute to the priorities of smart, sustainable and inclusive growth. However, the measures that the European Commission has taken so far to support it have been reductionist, limited to social enterprises. Ignoring the enormous potential of the social economy as a whole, they have excluded most SE enterprises from official initiatives to promote the collective entrepreneurship that is typical of this sector.

9.3. Recent European Union initiatives towards Social Economy

2011 saw an important shift in the European Commission's political agenda regarding the social economy, or more precisely, social enterprises.

There are a number of reasons why this happened: firstly, the depth of the economic crisis and increasing questioning of the European institutions helped to lead the Commission to seek alternative solutions; secondly, a new wave of social and institutional demands – such as the position paper on European civil society and the social economy and those of Social Economy Europe and Cooperatives Europe, the European academic world's "From words to action: Supporting cooperative and social enterprises to achieve a more inclusive, sustainable and

prosperous Europe" open letter of October 2010, the European Parliament's 2009 Resolution on the social economy (the Toia report) or the European Economic and Social Committee Opinion on the "Diverse forms of enterprise" – required the Commission to pay greater real attention to the social economy in its policies; thirdly, the application of the Small Business Act passed in 2008 (which explicitly cited the social economy) needed to be reviewed, leading to interest in social businesses; and finally, but no less importantly, there were circumstantial factors such as certain European policy makers' noticing the exceedingly high profile of social enterprises.

The Small Business Act and the Single Market Act were central in this respect:

The Social Business Initiative. On 23 February 2011 the Commission issued a Communication to the Council, the European Parliament, the European Economic and Social Committee and the Committee of the Regions that reviewed the "Small Business Act" – SBA – for Europe (COM(2011) 78 final). Its general aim was to take stock of the application of the SBA and assess the new needs of European SMEs in the current economic climate. This Communication specifically cites the "social economy" and pledges the Commission to "adopt, by the end of 2011, a Social Business Initiative focusing on enterprises pursuing social objectives."

As a result, on 25 October 2011 the Commission issued a new Communication to the Council, the European Parliament, the European Economic and Social Committee and the Committee of the Regions: the "Social Business Initiative. Creating a favourable climate for social enterprises, key stakeholders in the social economy and innovation" (COM(2011) 682 final). At the same time, on 26 October, the European Economic and Social Committee issued an Opinion on "Social entrepreneurship and social enterprise"⁸⁰.

The Social Business Initiative listed 11 key actions:

- 1: Proposal for a regulation on European social investment funds (07.12.2011)
- 2: Microfinance
- 3: A European financial instrument (06.10.2011)
- 4: Investment priority for social enterprises in the structural funds (06.10.2011); Common Strategic Framework (14.03.2012)
- 5: Mapping of social enterprises; business models, economic weight, tax regimes, identification of best practices; (action 9:) study on the situation of mutual societies
- 6: Data base of labels and certifications
- 7: National and Regional Administrations: promotion of mutual learning and capacity building
- 8: Electronic data exchange platform for social investors and entrepreneurs; access to EU education and training programs
- 9: Simplification of the Statute for a European Cooperative Society regulation and regulation for a European Foundation statute (08.02.2012)
- 10: Enhancement of the element of quality in awarding contracts in the context of the reform of public procurement
- 11: Simplification of the implementation of rules concerning State aid to social and local services

Other actions mentioned in the SBI

- Proposal for a Regulation on European Venture Capital Funds
- Reliable statistics on social enterprises
- Communication on EU State Aid Modernisation
- Public Consultation on the General Block Exemption Regulation
- SMEs: Consultation on "Europe 2020" action plan

Social Entrepreneurship – Social Economy. On 13 April 2011 the Commission issued a new Communication to the Council, the European Parliament, the European Economic and Social Committee and the Committee of the Regions: the "Single Market Act", Twelve levers to boost

⁸⁰ See http://ec.europa.eu/internal_market/social_business/index_en.htm

growth and strengthen confidence, "Working together to create new growth". Number 8 of these levers is Social Entrepreneurship, identified with the social economy. Its aim is "to promote the development of businesses which have chosen – above and beyond the legitimate quest for financial gain – to pursue objectives of general interest or relating to social, ethical or environmental development".

The action plan it sets out is as follows.

- “1. Legislation setting up a European framework facilitating the development of social investment funds.
2. In order to ensure a level playing field, the Commission will present a legislative proposal on the transparency of the social and environmental information provided by companies in all sectors.
3. In order to overcome these difficulties [for foundations to grow], the Commission will present a proposal for a Regulation establishing a European Foundation Statute.
4. Within the framework of the European Platform against Poverty and Social Exclusion, the Commission will support the development of the social economy as an instrument for active inclusion by proposing, in 2011, a "Social Business Initiative" and by facilitating access to the Union's financial programmes for use in this area.
5. In 2011 the Commission will also adopt a Communication on corporate social responsibility (CSR) – a wider concept than social business – which encourages all businesses to pursue actions with social or environmental objectives as part of their daily activities.”

CHAPTER 10

TRENDS AND CHALLENGES

10.1. The Social Economy: an emerging sector in a plural society

The main and most important trend that can be observed in the recent evolution of the Social Economy is its consolidation in European society as a *pole of social utility*, between the capitalist sector and the public sector, made up of a great plurality of actors: cooperatives, mutual societies, associations, foundations and other similar companies and organisations.

The citizens' associative movement is experiencing considerable growth through promoting solidarity business initiatives directed towards producing and distributing merit or social goods. Steadily greater collaboration between the associative and cooperative movements is discernable in the development of many of their projects and activities, as in the case of social enterprises. The capacity of these initiatives to solve the *new social needs* that have appeared in recent decades has revitalised the importance of the SE.

The SE has not only asserted its ability to make an effective contribution to solving new social problems, it has also strengthened its position in traditional sectors such as agriculture, industry, services, retailing, banking and mutual insurance. In other words, the SE is also making itself seen as a necessary institution for stable and sustainable economic growth, fairer income and wealth distribution, matching services to needs, increasing the value of economic activities serving social needs, correcting labour market imbalances and deepening and strengthening economic democracy.

The new SE is taking shape as an emerging sector which is increasingly indispensable if an adequate response to the new challenges of the global economy and society is to be provided. These challenges lie at the root of the increasing interest in the role that the new SE can play in the welfare society.

10.2. The necessary conceptual identification of the SE

A challenge that the SE needs to address without delay is that of ending its *institutional invisibility*. This invisibility is explained not only by the emerging nature of the SE as a new sector in the economic system but also by the lack of a conceptual identification, i.e. a clear, rigorous definition of the features that the different types of companies and organisations that make up the SE share and the specific traits that enable them to be distinguished from the rest.

On this point, a gradual process of conceptual identification of the SE has been discernible in recent years, drawing in both the players themselves, through their representative organisations, and scientific and political bodies. This Report presents a concept of the SE developed from the criteria set out in the *European Commission Manual for drawing up Satellite Accounts of Companies in the Social Economy*, which, in turn, concurs with the definitions formulated in the recent economics literature, in the recent SE laws passed in some European countries, such as Spain, Greece and Belgium (in the regions of Wallonie, Bruxelles and Flandres), and by the SE organisations themselves.

10.3. Legal identification of the SE and recognition in the national accounts

Conceptual identification of the SE will make it possible to tackle the challenge of its identification in the legal systems of the EU and EU member states. Although some European countries and the EU itself recognise the SE as such in a number of legal texts, together with some of its constituents, progress needs to be made on statutory definition of the extent of the SE and the requisites that its components must fulfil in order to prevent dilution of its identifying features and the loss of its social utility.

A *Legal Statute of the SE* and effective legal barriers to entry need to be introduced so that no non-SE organisation can benefit from economies of legal form of organisation or from public policies to encourage the SE.

This Report has also shown the increasing size of the SE, which directly provides over 14.5 million jobs, accounting for 6.5% of total EU employment. In contrast, it is invisible in the national accounts, a hurdle that constitutes another major challenge.

Current national accounting rules, drawn up at the height of mixed economy systems, do not acknowledge the SE as a differentiated institutional sector, making it difficult to draw up regular, accurate and reliable economic statistics on the agents of which it is composed. Internationally, the heterogeneous criteria employed in drawing up statistics prevent comparative analyses and detract from the authority of approaches which draw attention to the evident contribution that the SE makes to achieving major economic policy objectives.

The recent preparation of the European Commission's *Manual for drawing up the Satellite Accounts of Companies in the Social Economy* is an important step towards institutional recognition of one part of the SE in the national accounts systems. The Manual explains the methodology by which reliable, harmonised statistics can be drawn up throughout the EU, within the National Accounts framework (the 1995 ESA), for five major groups of SE companies: a) cooperatives, b) mutual societies, c) SE business groups, d) other similar companies in the SE and e) non-profit institutions serving SE companies.

The SE in Europe has to meet a double challenge in this field. Firstly, the organisations that represent the SE need to make their voice heard in the European Commission and in each of the Member States to ensure that the Manual's proposals are put into effect. Specifically, they need to get each EU member state to set up a *Statistical Register of Companies in the Social Economy*, based on the delimitation criteria laid down in the Manual, so that satellite accounts covering the companies in these registers can be drawn up.

Secondly, they need to promote initiatives that will make it possible to prepare reliable, harmonised statistics on the large segment of the SE that is not covered by the European Commission's Manual. This segment is largely made up of associations and foundations, which are covered by the United Nations' *Handbook on Non-Profit Institutions in the System of National Accounts*. This NPI Handbook includes many non-profit organisations that are not part of the SE, but it would be possible to disaggregate the statistics for non-profit organisations that meet the SE identity criteria, as defined in this Report, from non-profit sector statistics drawn up in accordance with the Handbook.

10.4. Coordination between SE federations

Being plural and multiform, the SE needs strong organisations to represent the different groups of companies and organisations of which it is composed. However, the identity which they all share and the nucleus of common interests that agglutinates the SE suggest the necessity and advisability of wholeheartedly undertaking processes to achieve associative coordination of the entire SE, both at each of the national levels and transnationally throughout Europe. The more visible and powerful the collective image transmitted by the SE, the greater the chances of

effective action and development will be for each and every one of the groups of agents that make up this sector.

10.5. The SE and social dialogue

Achieving recognition of the SE as a specific interlocutor in the social dialogue is a very considerable challenge.

The SE has become a major institution of civil society which contributes significantly to the organisation of its associative fabric and the development of participative democracy. At the same time, nonetheless, the SE is a potent economic and social actor with specific characteristics that escape the classic scheme of employers/employees and demand that the SE be expressly recognised as a social interlocutor.

During the second half of the 20th century, at the height of the mixed economy systems, the major figures at the negotiating tables which agreed public policies (particularly income policies) were governments, employers' organisations and trades unions. Nowadays, however, the economy has become more plural and this demands direct participation in the social dialogue by all the sectors involved: employers' federations, trades unions, governments and this other great group of social and economic players, entrepreneurs and employers that comprises the new SE and is playing an increasingly prominent role in the developed world.

Together with the classic *collective bargaining tables*, *social dialogue tables* that include the *SE agents* should be proposed, as these would be more in accordance with the new economic scenario at the start of the century.

10.6. The SE and public policies

For over two decades, the European institutions (Parliament, Commission and Economic and Social Committee) have recognised the SE's capacity for correcting significant social and economic imbalances and helping to achieve various objectives of general interest. Recently, the European Parliament has approved a very important report on "Social Economy" and the EESC has approved an Opinion on "Diverse forms of enterprise", recognising the specific, differentiated nature of social economy enterprises.

As a result, even more than before, the member countries and the European Commission must undertake concrete commitments to make the SE not only an effective instrument to achieve particular public policy objectives in the general interest but also, in itself (i.e. cooperativism, mutualism, associationism and general interest initiatives by civil society), an objective in its own right, indispensable for the consolidation of a developed society and the values associated with the European social model. At this point, the organisations that represent the ES have an important part to play by presenting initiatives and proposals to the EU institutions, political parties, trades unions, universities and other organisations that represent civil society.

European Commission Social Enterprise Initiatives since 2011

10.7. The SE facing economic and welfare state crisis

Over the 2008-2012 period, the SE has been showing a remarkable capacity to face up to the negative consequences of the current cycle of depression and make a significant contribution to the three main priorities of the Europe 2020 strategy: smart, sustainable and inclusive growth.

In terms of innovation, the SE is pioneering the launch of new products and initiatives that fight social exclusion effectively, as social enterprises have shown through

their experiences in many European countries. The force of innovation systems with strong ties to particular areas that combine and reconcile efficient responses to the challenges of globalisation with commitment to maintaining local employment (Mondragon's multi-location production, cooperative agri-food chains, etc.) may also be noted.

The SE enterprises' organisational and social innovation are among the basic reasons for their greater resistance to job destruction and insecurity. Because they have a more participative and democratic governance model and the workers are more committed to the company as a result of sharing the ownership and the risk, companies that are self-managed by their workers are withstanding the economic crisis better than others.

In terms of sustainable and inclusive growth, the SE's value system translates into solidarity with the community and the environment, internalising social costs and generating positive externalities. For example, cooperatives accumulate indivisible assets and apply the "open doors" principle. Over time, this creates a historical solidarity mechanism that provides future generations with productive wealth, making it easier for them to follow a path of sustained and sustainable growth.

10.8. The SE, the new enlarged European Union and the development of an integrated Euro-Mediterranean space

The EU places great importance on the objective of consolidating an integrated European space where social and economic inequalities between the EU-15 and the 12 new member countries in Eastern and Southern Europe will be diminished and eliminated as soon as possible. Among other consequences, these inequalities have caused considerable migratory flows from East to West within the EU. Together with stronger social cohesion in the EU, another challenge is to foster an integrated Euro-Mediterranean space that will become an area of prosperity and stability. For this, all the countries bordering on the Mediterranean need to consolidate strong democratic states and the productive fabric of civil society in the southern rim countries needs to be expanded.

In these countries, high population growth and other structural reasons are preventing their economic growth from leading to a higher standard of living for the majority of the population, which is why the Euro-Mediterranean region and the EU have become one of the geographical areas with the greatest migratory movements, in terms of both size and intensity. These are further compounded by large population groups from Latin America, Sub-Saharan Africa and South-East Asian countries.

Owing to their specific characteristics, the SE actors can play a major role both in integrating the immigrant population and in developing trade flows within the EU and between Europe and the southern shores of the Mediterranean.

10.9. The educational system, research and networks, the university and the SE

The European Union's education systems are destined to perform an important function in fostering entrepreneurial culture and democratising the economy through training projects that stimulate entrepreneurial initiatives based on the values which characterise the SE. In turn, the development of new products and innovative processes in SE companies require these to boost initiatives for cooperation with the university centres that generate and transmit knowledge. Research networks and information exchange networks between these centres and SE professionals will contribute, as they have been doing in recent years, to broadening the necessary SE-specific knowledge bases and disseminating this knowledge throughout Europe.

10.10. SE identity and values

The new SE is taking shape in the European Union as a *pole of social utility* in a plural economy system, alongside a public economy sector and a capitalist economy sector. The challenge that the SE must face is to surmount the dangers of dilution or trivialisation of its identifying features, which are what give it its specific social utility. Because of this, the SE actors need to deepen their awareness of the values that make up their shared core of reference, use all the social and cultural levers that are attuned to these values to reaffirm their own institutional profile and achieve an effect that multiplies their economic and social potential.

The challenges and trends outlined above are not a conclusive decalogue but a proposal that is open to debate, a starting point for reflection in the new phase that has opened up in Europe with the recent expansions of the European Union.

In this new phase and new social economy, all the prominence and all the responsibility for defining its specific profiles and the strategic objectives it should adopt in order to play a leading part in building Europe rightfully fall to the actors in the social economy itself.
